

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1) Circles are females and squares are males.
- 2) A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person 1 - 15. Then answer the questions below the table.

What do you know about the genotype of the mother of 1?

These parents (1) had a color blind son (2). His dad is normal, his color blind mom, from his mother. Since the mother is not shaded she must be a carrier.

Number 3 is color blind just like his father. Where could he get his allele for color blindness?

Yes, he must get his allele for color blindness from his mother. Must have been that 1's chromosomes from her father.

Number numbers 11 and 12 were color blind. How did they have a color blind son (13)?

Both mother and father are carriers for color blindness.

What must be the genotype of the parents of a color blind daughter (14)?

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be $X^c Y$ and mother must have to be $X^c X^c$.

If number 14 has a normal son, what is the probability that their son will be color blind?

$X^c X^c \times X^c Y \rightarrow$ all of their sons will be color blind.
