Genetics and Heredity Unit Study Guide/Practice Test 2013-2014

Section 1 Cell Division

What are the two types of cell division that we have discussed in this unit?

1. Mitosis

2. Meiosis

Complete the following chart:

Type of cell division	<u>Mitosis</u>	<u>Meiosis</u>
Cell starts out as a body (somatic) or sex cell?	<u>Somatic cell</u>	<u>Somatic cell</u>
Function of this process	<u>To create more somatic cells. Growth and repair of body cells, tissues, and organs.</u>	<u>Production of gametes (egg and sperm)</u>
Initial cell is haploid or diploid?	<u>Diploid</u>	<u>Diploid</u>
Nucleus divides once or twice?	<u>Once</u>	<u>Twice</u>
Number of daughter cells at end of cell division?	<u>2</u>	<u>4</u>
End product is a body (somatic) cell or gamete?	<u>Somatic cells</u>	<u>Gametes</u>
End product is diploid or haploid	<u>Diploid</u>	<u>Haploid</u>
If there are 3 pairs of homologous chromosomes in the cell at the beginning of cell division, how many chromosomes will be in each cell at the end of cell division?	<u>6</u>	<u>3</u>

1. A human body cell contains 23 pairs of homologous chromosomes or a total of 46 chromosomes.

****Note:** Homologous chromosomes are pairs of chromosomes in which one chromosome comes from the mother and one comes from the father. Homologous chromosomes are similar but not identical. Each carries the same genes in the same order, but the alleles for each trait may not be the same.

2. What occurs during mitotic cell division:

During mitosis and cell division, the chromosomes duplicate and then separate. At the end of mitosis, a new nucleus forms around each new set of chromosomes and then the cell divides in a process called cytokinesis. This creates two new identical daughter cells.
