analysts differential equations specialists and graph theorists to provide a glimpse on recent mathematical trends whose
commonalities have hitherto remained for the most part unnoticed The applied mathematician will be pleasantly surprised
with the interpretation of a voting system in terms of the fixed points of a mapping given in the book as much as the classical
analyst will be enthusiastic to find detailed discussions on the generalization of the notion of metric space in which the metric
takes values on an abstract monoid Classical themes on fixed point theory are adapted to the diverse setting of graph theory
thus uncovering a set of tools whose power and versatility will be appreciated by mathematicians working on either area The
volume also includes recent results on variable exponent spaces which reveal much needed connections with partial
differential equations while the incipient field of variational inequalities on manifolds also explored here will be of interest to
researchers from a variety of fields
