Commutative Algebra, Volume II Oscar Zariski, Pierre Samuel, 2019-11-13 The second text in this two book series extends the classical material of Volume I which focuses on field theory and the ideal theory of Noetherian rings and Dedekind domains The connection of Volume II's material to algebraic geometry is stressed throughout the presentation making this book a practical introduction to some basic concepts and the arithmetical foundations of algebraic geometry The opening chapter deals with properties of places and is followed by a chapter that explores the classical properties of polynomial and power series rings and their applications to algebraic geometry The final chapter examines the theory of local rings which provides the algebraic basis for the local study of algebraic and analytical varieties Several helpful Appendixes conclude the text

Kunihiko Kodaira, Volume II Kunihiko Kodaira, 2015-03-08 Kunihiko Kodaira's influence in mathematics has been fundamental and international and his efforts have helped lay the foundations of modern complex analysis These three volumes contain Kodaira's written contributions published in a large number of journals and books between 1937 and 1971 The volumes cover chronologically the major periods of Kodaira's mathematical concentration and reflect his collaboration with other prominent theoreticians It was in the second period that Kodaira did his fundamental work on harmonic integrals The third period is chiefly characterized by the application of harmonic integrals and of the theory of sheaves to algebraic geometry and to complex manifolds Originally published in 1975 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905

Constructing Quantum Mechanics Volume Two Michel Janssen, Anthony Duncan, 2023-08-17 This is the second of two volumes on the genesis of quantum mechanics in the first quarter of the 20th century It covers the period 1923-1927 After covering some of the difficulties the old quantum theory had run into by the early 1920s as well as the discovery of the exclusion principle and electron spin it traces the emergence of two forms of the new quantum mechanics matrix mechanics and wave mechanics in the years 1923-27 It then shows how the new theory took care of some of the failures of the old theory and put its successes on a more solid basis Finally it shows how in 1927 the two forms of the new theory were unified first through statistical transformation theory then through the Hilbert space formalism This volume provides a detailed analysis of the classic papers by Heisenberg Born Jordan Dirac De Broglie Einstein Schrödinger von Neumann and other authors Drawing on the correspondence of these and

other physicists their later reminiscences and the extensive secondary literature on the quantum revolution this volume places these papers in the context of the discussions out of which modern quantum mechanics emerged It argues that the genesis of modern quantum mechanics can be seen as the construction of an arch on a scaffold provided by the old quantum theory discarded once the arch could support itself **Environmental Systems - Volume II** Achim Sydow,2010-09-27

Elliptic Carleman Estimates and Applications to Stabilization and Controllability, Volume II Jérôme Le Rousseau,Gilles Lebeau,Luc Robbiano,2022-04-22 This monograph explores applications of Carleman estimates in the study of stabilization and controllability properties of partial differential equations including quantified unique continuation logarithmic stabilization of the wave equation and null controllability of the heat equation Where the first volume derived these estimates in regular open sets in Euclidean space and Dirichlet boundary conditions here they are extended to Riemannian manifolds and more general boundary conditions The book begins with the study of Lopatinskii Sapiro boundary conditions for the Laplace Beltrami operator followed by derivation of Carleman estimates for this operator on Riemannian manifolds Applications of Carleman estimates are explored next quantified unique continuation issues a proof of the logarithmic stabilization of the boundary damped wave equation and a spectral inequality with general boundary conditions to derive the null controllability result for the heat equation Two additional chapters consider some more advanced results on Carleman estimates The final part of the book is devoted to exposition of some necessary background material elements of differential and Riemannian geometry and Sobolev spaces and Laplace problems on
