Migration of Farm Workers to Rural Scotland Dr. Iqbal Md Mostafa,2018-08-30 The migration of farm workers to rural Scotland is an important issue that relates to the existing theories and research in contemporary equality and cultural capital studies particularly in regard to the exploration of how and in what ways cultural capital theory can be addressed to study migrants equality claims the examination of how complex equality models can be used for inquiry into the reinforcement of inequalities in cultural capital and the accumulative effects of such inequality In particular the experiences of East European migrant farm workers challenge theoretical perspectives that apply a an approach of equality claim from cultural capital which emphasize b equal right to recognition and therefore c focus on entitlement to equal protection against any discrimination This book therefore offers us a way to explore these experiences with a call for attention to be paid to a large number of East European migrant farm workers who have migrated to rural Scotland to work in low paid jobs marked with low skills Unlike majority members of a population migrant farm workers often give up their cultural capital and take up low skilled jobs in order to gain opportunities for success in other spheres in their lives Critiquing such a trade off approach if the sphere of migrants cultural capital is invaded and the cultural capital of local workers native is acknowledged migrants are in a vulnerable position I also argue although migrants achievements are devalued and their substantive equality remains unprotected their claim from cultural capital is relatively strong and valid to manage The more vulnerable a migrants cultural capital is in terms of recognition and protection the stronger his or her claim from cultural capital will be Under the theoretical framework I argue that if equal recognitions of cultural capital are not actively ensured this is highly likely to produce increased claims to equality **Resources in Education** ,1995-04 **Gender and STEM** Namrata Gupta,2025-02-27 This book studies the prevalence of gender inequalities in the domains of science technology engineering and mathematics STEM in India It explores the paradox of an increasing number of women pursuing higher education in

The Transnationalized Social Question Thomas Faist, 2018-11-30 The social question is back Yet today s social question is not primarily between labour and capital as it was in the nineteenth century and throughout much of the twentieth The contemporary social question is located at the interstices between the global South and the global North It finds its expression in movements of people seeking a better life or fleeing unsustainable social political economic and ecological conditions It is transnationalized not only because migrants and their significant others entertain ties across the borders of national states staying in touch with family and friends receiving or sending financial remittances in transnational social spaces Also of importance are cross border recruitment schemes for workers and the cross border diffusion of norms appealed to in the case of migration for example the social right to decent work as a human right Moreover migration can become an issue of inclusion or exclusion in fields important to life chances in the emigration transit or immigration states a transnationalization of national states And as in the nineteenth century political conflicts arise constituting the social question as a public concern In earlier periods class differences dominated conflicts While class has always been criss crossed by manifold heterogeneities not least of all cultural ones around ethnicity religion and language it is these latter heterogeneities that have sharpened in situations of immigration and emigration over the past decades Casting a wide net in terms of conceptual and empirical scope this book tackles both the social structure and the politics of social inequalities It sets a comprehensive agenda for research which also includes the public role of social scientists in dealing with the transnationalized social question

Engineering the Environment David P. D. Munns, 2017-07-19 Promising an end to global hunger and political instability huge climate controlled laboratories known as phytotrons spread around the world to thirty countries after the Second World War The United States built nearly a dozen including the first at Caltech in 1949 Made possible by computers and other novel greenhouse technologies of the early Cold

War phytotrons enabled plant scientists to experiment on the environmental causes of growth and development of living organisms. Subsequently they turned biologists into technologists who in their pursuit of knowledge about plants also set out to master the machines that controlled their environment. *Engineering the Environment* tells the forgotten story of a research program that revealed the shape of the environment, the limits of growth and development and the limits of human control over complex technological systems. As support and funding for basic science dwindled in the mid 1960s phytotrons declined and ultimately disappeared until nearly thirty years later the British built the Ecotron to study the impact of climate change on biological communities. By revisiting this history of phytotrons David Munns reminds us of the vital role they can play in helping researchers unravel the complexities of natural ecosystems in the Anthropocene. *The Handbook of Global Shadow Banking, Volume I* Luc Nijs, 2020-06-30 This global handbook provides an up to date and comprehensive overview of shadow banking or market based finance as it has been recently coined. Engaging in financial intermediary services outside of normal regulatory parameters the shadow banking sector was arguably a critical factor in causing the 2007-2009 financial crisis. This volume focuses specifically on shadow banking activities, risk policy and regulatory issues. It evaluates the nexus between policy design and regulatory output around the world, paying attention to the concept of risk in all its dimensions: the legal, financial, market, economic and monetary perspectives. Particular attention is given to spillover risk, contagion risk and systemic risk and their positioning and relevance in shadow banking activities. Newly introduced and incoming policies are evaluated in detail as well as how risk is managed, observed and assessed and how new regulation can potentially create new sources of risk. Volume I concludes with analysis of what will and still needs to happen in the event of another crisis. Proposing innovative suggestions for improvement including a novel Pigovian tax to tame financial and systemic risks, this handbook is a must read for professionals and policy makers within the banking sector as well as those researching economics and finance.
