Repairing the Climate L.J. Reinders, 2024-11-01 Climate change is triggered by a too high concentration of greenhouse gases in the air carbon dioxide in particular primarily originating from fossil fuel burning Since such burning will not stop any time soon the concentration will undoubtedly rise further exacerbating climate change There is no escape from this That is where carbon capture comes in direct air capture DAC scrubs the surplus carbon dioxide out of the air for actually lowering this concentration At the same time emission levels must be drastically lowered by fitting point source emitters with carbon capture installations This book sets out the case for such carbon capture which is a must without which the climate cannot be repaired
