Modern

Macroeconomics Dibyendu Banerjee, Ramesh Chandra Das, 2024-12-10. This comprehensive textbook deals with

multidimensional aspects of macroeconomics through lucid presentation of concepts and critical comparison of different schools of thought. The book explains how the incomes of a country, prices of goods and services, level of employment, interest rates, and so on are determined and how an economy progresses. It attempts to re-establish the existing theories behind the determination of macro variables and the growth process of an economy. In the process, it captures the significance of the debate between the classical orthodox theories and Keynesian modernism and its implications. Besides adhering to traditional aspects, the volume also focuses on recent developments such as green macroeconomics. Undergraduate and postgraduate students of economics and business economics will find this book immensely helpful.

Crowding Out Fiscal Stimulus John J. Heim, 2016-12-08

This book presents overwhelming evidence that US government stimulus programs over the past fifty years have not worked. Using the best and most modern econometric testing models, it applies 228 separate hard science tests to examine the effects of different stimulus models that should in theory have shown positive results. By testing every possible alternative interpretation, starting with one time period and then retesting in three additional time periods, this definitive study finds that even when favoring pro-stimulus Keynesian models, public financing through government tax cuts and spending increase programs is more likely to drive down or crowd out as much private sector spending as it stimulates in the public sector.
