Computer Performance Evaluation Ramon Puigjaner, Nunzio N. Savino, Bartomeu Serra, 2003-06-26 The need to evaluate computer and communication systems performance and dependability is continuously growing as a consequence of both the increasing complexity of systems and the user requirements in terms of timing behaviour The 10th International Conference on Modelling Techniques and Tools for Computer Performance Evaluation held in Palma in September 1998 was organised with the aim of creating a forum in which both theoreticians and practitioners could interchange recent techniques tools and experiences in these areas This meeting follows the predecessor conferences of this series 1984 Paris 1988 Palma 1994 Wien 1985 Sophia Antipolis 1991 Torino 1995 Heidelberg 1987 Paris 1992 Edinburgh 1997 Saint Malo The tradition of this conference series continued this year where many high quality papers were submitted The Programme Committee had a difficult task in selecting the best papers Many new papers could not be included in the program due to space constraints All accepted papers are included in this volume Also a set of submissions describing performance modelling tools was transformed into tool presentations and demonstrations A brief description of these tools is included in this volume The following table gives the overall statistics for the submissions

Business Object Design and Implementation III D. Patel, J. Sutherland, J. Miller, 2012-12-06 The NCITS Accredited Standards Committee H7 Object Information Management now part of NCITS T3 Open Distributed Processing and the Object Management Group Business Object Domain Task Force BODTF jointly sponsored the Fifth Annual OOPSLA Workshop on Business Object Component Design and Implementation The focus of the workshop was on design and implementation of business object component frameworks and architectures Key aspects discussed included What is a comprehensive definition of a business object component Are the four layers user workspace enterprise resource presented at the OOPSLA 98 workshop the right way to layer a business object component system How is

a business object component implemented across these layers What are the associated artefacts Are there different object models representing the same business object component in different layers What are the dependencies between business object components How can they be plug and play given these dependencies How can they be flexible and adaptive How do they participate in workflow systems How will the emergence of a web based distributed object computing infrastructure based on XML influence business object component architectures In particular is the W3C WebBroker proposal appropriate for distributed business object component computing The aim of the workshop was to Enhance the pattern literature on the specification design and implementation of interoperable plug and play distributed business object components BIS '99 Witold Abramowicz, Maria E.
