

Results of the survey are shown in the table below.

| PHENOTYPE FREQUENCIES IN AN ISOLATED BIRD POPULATION |                       |
|------------------------------------------------------|-----------------------|
| Phenotype                                            | Number of Individuals |
| Red crest feathers                                   | = 11,088              |
| White crest feathers                                 | 1,759                 |

Assuming that the bird population is in Hardy-Weinberg equilibrium, what proportion of future populations is expected to be heterozygous for the allele controlling crest feather color? Give your answer as a value between 0 and 1, rounded to two decimal places.
