Math Makes Sense!: A Constructivist Approach To The Teaching And Learning Of Mathematics Ana Helvia

Quintero, Hector Rosario, 2016-03-02 The methods for teaching mathematics usually follow the structure of mathematics. The problem with this is that the structure of mathematics took centuries of elaboration to develop and is not the same as how one originally experiences mathematics. Based on research of how mathematics is actually learned, this book presents an innovative approach for teaching mathematics that will engage pupils and can have lifelong benefits for how they take on board more advanced mathematical topics. Math Makes Sense makes use of the realistic mathematics education (RME) philosophy which bridges the gap between informal mathematics learning such as in day to day life and more formal teaching in school. Many real life situations as examples for learning are included as well as different mathematical and logic puzzles that will stimulate learning and foster understanding. The ideas presented are not confined to one national curriculum and so can be helpful worldwide to teachers, instructors both in practice and those still in training, private tutors, homeschooling parents and educational researchers.

Navigating MathLand Linda Kasal Fusco, 2017-06-21 Navigating MathLand uses a unique lens to focus on how students prefer to learn mathematics. The intent of this book is to provide a guide for parents to help them navigate the thirteen years of their children's math education (K-12). The book will provide parents with the knowledge and skills they will need to proactively advocate for their children's preparation for the 21st century workforce.

Developing Mathematical Reasoning Pamela Weber Harris, 2025-02-18 Math is not rote, memorizable. Math is not random, guessable. Math is figure out-able. Author Pam Harris argues that teaching real math, math that is free of distortions, will reach more students more effectively and result in deeper understanding and longer retention. This book is about teaching undistorted math using the kinds of mental reasoning that mathematicians do. Memorization tricks and algorithms meant to make math easier are full of traps that sacrifice long-term student growth for short-lived gains. Students and teachers alike have been led to believe that they've learned more and more math, but in reality, their brains never get any stronger. Using these tricks may make facts easier to memorize in isolation, but that very disconnect distorts the reality of math. The mountain of trivia piles up until students hit a breaking point. Humanity's most powerful system of understanding, organizing, and making an impact on the world becomes a soul-draining exercise in confusion, chaos, and lost opportunities. *Developing Mathematical Reasoning: Avoiding the Trap of Algorithms* emphasizes the importance of teaching students increasingly sophisticated mathematical reasoning and understanding underlying concepts rather than relying on a set rule for solving problems. This book illuminates a hierarchy of mathematical reasoning to help teachers guide students through various domains of math development from basic counting and adding to more complex proportional and functional reasoning. Everyone is capable of understanding and doing real math. This book highlights the important mathematical relationships, strategies, and models for students to develop. Offers personal stories, reflection sections, and extensive practical exercises for

easy implementation Includes real math a lot of it to provide teachers with examples they can put to use in their classrooms immediately This book is a valuable resource for educators looking to reach more students by building a strong foundation of mathematical thinking in their students By addressing common misconceptions about math and providing practical strategies for teaching real math this book shows that everyone can use the mathematical relationships they already know to reason about new relationships In other words everyone can math

Paramedic: Calculations for Medication Administration American Academy of Orthopaedic Surgeons (AAOS), Mithriel Salmon, David S. Pomerantz, 2008-10-13 I love math I hate math Whether you re a math aficionado or someone who cringes at calculations

Paramedic Calculations for Medication Administration will make you a master of paramedic math. This textbook teaches the basic principles of mathematics and applies these principles to cases that paramedics face on the job. Chapters cover math rules and principles, fractions, decimals, and percentages, ratios, proportions, and conversion factors, and rate-dependent and weight-based calculations. Practice problems are scattered throughout the chapters; students practice as they go. Every chapter highlights how paramedics can make use of the math knowledge that they already have in order to solve more complicated problems. Chapters begin with the simple and obvious and progress to the level used in the field. Practice makes perfect; this text has over 700 practice problems. In addition to the in-chapter practice, chapters conclude with more problems. Complete answers to every problem, including explanations, are provided in the answer key. Every step is included, making it easy to follow how an answer was reached. Part of the AAOS Paramedic Series, this book covers all the DOT objectives related to calculations for medication administration and can be used in prerequisite or co-requisite paramedic math courses. 2009, 224 pages.

Mastering First Grade Skills Jodene Lynn Smith, 2007-03

Re-theorising Learning and Research Methods in Learning Research Crina Damşa, Antti Rajala, Giuseppe Ritella, Jasperina Brouwer, 2023-09-22

Re-Theorising Learning and Research Methods in Learning Research explores the latest developments in the field of learning theory, offering an overview of emerging methods and demonstrating how recent research contributes to furthering understanding of learning. This book illustrates how theory and methods inform one another, facilitating advancements in the field while addressing the ways in which societal and technological change create a need for adapting approaches to examining learning. Drawing on an international team of contributors, this book comprises 17 chapters and three commentaries, thematically organised into three broad sections: emerging theories and conceptualisations of learning and how they drive methodological development; new methods or innovative use of existing methods and their contribution to theory development; theories and methods that emerge in connection with societal changes. Both novice researchers and more experienced scholars will benefit from an overview of recent theoretical and methodological advances in the learning research field. This is an invaluable resource for researchers in the learning and educational research field and will also support Masters and PhD students to understand how learning theories and research methodology in the field have been evolving in recent years.
