FM'99 - Formal Methods Jeannette M. Wing, Jim Woodcock, Jim Davies, 2003-07-31 Formal methods are coming of age. Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations. A transfer of technology into the mainstream of systems development is slowly but surely taking place. FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity. It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems. These proceedings are a record of the technical symposium of FM 99 alongside the papers describing applications of formal methods, you will find technical reports, papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools. The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia. This session reflects an increasing openness within the international community of researchers and practitioners. Papers were submitted covering a wide variety of formal methods and application areas. The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries. The committee was divided into 19 tracks each with its own chair to oversee the reviewing process. Our collective task was a difficult one: there were 259 high quality submissions from 35 different countries.

Safety and Reliability of Software Based Systems Roger Shaw, 2012-12-06 Safety and Reliability of Software Based Systems contains papers presented at the twelfth annual workshop organised by the Centre for Software Reliability. This book discusses safety cases and their varying roles in different industries using measurement to improve reliability and safety of software based systems, latest developments in managing developing and assessing software intensive systems where reliability and or safety are important considerations and practical experiences of others in industry.

Software Quality Approaches: Testing, Verification, and Validation Michael Haug, Eric W. Olsen, Luisa Consolini, 2012-12-06 C Amting Directorate General Information Society European Commission Brussels. Under the 4 Framework of European Research the European Systems and Software Initiative ESSI was part of the ESPRIT Programme. This initiative funded more than 470 projects in the area of software and system process improvements. The majority of these projects were process improvement experiments carrying out and taking up new development processes, methods and technology within the software development process of a company. In addition nodes, centres of expertise, European networks, organisations managing local activities, training and dissemination actions complemented the process improvement experiments. ESSI aimed at improving the software development capabilities of European enterprises. It focused on best practice and helped European companies to develop world class skills and associated technologies to build the increasingly complex and varied systems needed to

compete in the marketplace The dissemination activities were designed to build a forum at European level to exchange information and knowledge gained within process improvement experiments Their major objective was to spread the message and the results of experiments to a wider audience through a variety of different channels The European Experience Exchange UR X project has been one of these dissemination activities within the European Systems and Software Initiative UR has collected the results of practitioner reports from numerous workshops in Europe and presents in this series of books the results of Best Practice achievements in European Companies over the last few years FM ...
