Electrical diagram

The diagram illustrates an electrical circuit with the following components and connections:

- Power Source:** A battery symbol on the left.
- Switches:** Two single-pole single-throw (SPST) switches. One is on the top horizontal wire, and the other is on the middle horizontal wire.
- Resistors:** Represented by rectangles. There are four resistors: one on the top wire after the first switch, one on the bottom wire, one on a vertical branch from the top wire, and one on a vertical branch from the middle wire.
- Capacitors:** Represented by two parallel lines. There are two capacitors: one on a vertical branch from the top wire and one on a vertical branch from the middle wire.
- Lamps:** Represented by circles with an 'X' inside. There are two lamps: one on a vertical branch from the top wire and one on a vertical branch from the middle wire.
- Other Components:** A variable capacitor (rectangle with a diagonal line) and a variable inductor (rectangle with a vertical line) are connected in series on a branch from the middle wire. A switch is also connected in series on a branch from the top wire.

The circuit is connected in a complex manner, with multiple branches and loops. The components are color-coded: resistors are grey, capacitors are light blue, and lamps are light blue with a grey 'X'.
