

Create Application Server

Use the **Create Application Server Wizard** to create a new application server to run Web applications with dynamic content, and the Web server group configuration for an associated external HTTP server, and create all necessary database providers and connections required for the Web applications you choose to install.

Configure Host Mapping

An application must be mapped to a host in order to be processed. Mapping is defined by the host name or IP address, and a port number. By default, the application is configured to be accessible through a default set of hosts, referred to as the application server. For web to more granular control, you can restrict access to your application by configuring it to specific hosts.

Install Application

Applications must be installed onto the application server to be accessible. The **Install New Application wizard** takes your action file that contains the application and deploys the application on the server.

Setup Database Connection

Many applications need to access databases to retrieve and store data. Database providers and connections are the objects used to tell the server how to access the database, what database to access, and where the database is located.
