Congress. House. Committee on Appropriations. Subcommittee on Interior, Environment, and Related Agencies, 2013 *The War of Guns and Mathematics* David Aubin, Catherine Goldstein, 2014-10-07 For a long time

World War I has been shortchanged by the historiography of science. Until recently World War II was usually considered as the defining event for the formation of the modern relationship between science and society. In this context the effects of the First World War by contrast were often limited to the massive deaths of promising young scientists. By focusing on a few key places—Paris, Cambridge, Rome, Chicago, and others—the present book gathers studies representing a broad spectrum of positions adopted by mathematicians about the conflict, from militant pacifism to military scientific or ideological mobilization. The use of mathematics for war is thoroughly examined. This book suggests a new vision of the long-term influence of World War I on mathematics and mathematicians. Continuities and discontinuities in the structure and organization of the mathematical sciences are discussed as well as their images in various milieus. Topics of research and the values with which they were defended are scrutinized. This book in particular proposes a more in-depth evaluation of the issue of modernity and modernization in mathematics. The issue of scientific international relations after the war is revisited by a close look at the situation in a few Allied countries: France, Britain, Italy, and the USA. The historiography has emphasized the place of Germany as the leading mathematical country before WWI and the absurdity of its postwar ostracism by the Allies. The studies presented here help explain how dramatically different prewar situations prolonged interaction during the war and new international postwar organizations led to attempts at redrafting models for mathematical developments.

*Domestication Gone Wild* Heather Anne Swanson, Marianne Elisabeth Lien, Gro B. Ween, 2018-09-27. The domestication of plants and animals is central to the familiar and now outdated story of civilization's emergence. Intertwined with colonialism and imperial expansion, the domestication narrative has informed and justified dominant and often destructive practices. Contending that domestication retains considerable value as an analytical tool, the contributors to *Domestication Gone Wild* reengage the concept by highlighting sites and forms of domestication occurring in unexpected and marginal sites, from Norwegian fjords and Philippine villages to British falconry cages and South African colonial townships. Challenging idioms of animal husbandry as human mastery and progress, the contributors push beyond the boundaries of farms, fences, and cages to explore how situated relations with animals and plants are linked to the politics of human difference and conversely how politics are intertwined with plant and animal life. Ultimately, this volume promotes a novel decolonizing concept of domestication that radically revises its Euro and anthropocentric narrative.
