Science SOL 5.2: Forms of Energy

Comprehension: Energy can move in different ways, it can be transformed from one form to another, but it cannot be created or destroyed.

Energy is the ability to cause change or do work. Energy can be transferred or cannot move and transform energy.

Table of Contents

electrical energy	mechanical energy	thermal/light energy	chemical energy	sound energy
energy that flows through an electrical circuit	energy in motion	energy in the form of heat or light that we can see	energy in the bonds of atoms	energy in the form of vibration
				
<ul style="list-style-type: none"> computer television air conditioning 	<ul style="list-style-type: none"> rolling ball moving car energy in motion 	<ul style="list-style-type: none"> heat lamps incandescent light 	<ul style="list-style-type: none"> batteries food in muscles gas in gasoline 	<ul style="list-style-type: none"> radio speakers music whistle

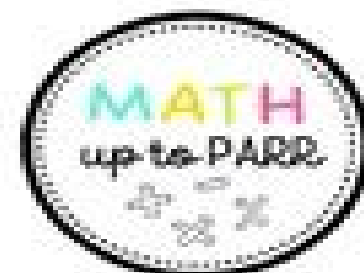

Classroom Connections

Energy cannot be created or destroyed. However, it can transform. Give your class the opportunity to discuss how energy can be transformed. A student who says "the energy from the battery is transformed into light energy" is correct. A student who says "the energy from the battery is transformed into light energy" is incorrect. The energy from the battery is transformed into light energy, but the energy from the battery is not transformed into light energy.

Energy can be transferred from one object to another, but it cannot be created or destroyed. If a ball is thrown in the air, the ball has kinetic energy and potential energy. The ball's kinetic energy is transferred to the ball's potential energy as it moves up. The ball's potential energy is transferred back to its kinetic energy as it falls.

Here are some other examples of energy transformations:

input	output	output
electrical energy	light energy	heat energy
mechanical energy	chemical energy	sound energy
