

1. The first step in the process of creating a new product is to identify a market need. This can be done through market research, which involves gathering information about the target market and its needs. Once a market need has been identified, the next step is to develop a concept for a new product that meets this need.

2. The second step in the process is to develop a prototype. This involves creating a physical model of the product that can be used to test the concept and gather feedback from potential customers. Once a prototype has been developed, the next step is to conduct a feasibility study to determine whether the product is viable and whether it can be manufactured at a reasonable cost.
