LEED Practices, Certification, and Accreditation Handbook Sam Kubba, 2009-09-23. Adopted in the United States and a number of other countries, LEED certification is the recognized standard for measuring building sustainability. Achieving LEED personal certification or project certification is the best way to demonstrate that the project is truly green. Written by an architect with over 30 years of international experience, this book provides architects, designers, building owners, and construction engineers with an easy-to-understand guide to the nuts and bolts of LEED project and personal certification. Written in plain and easy-to-understand language, this hands-on book is designed to assist readers with all aspects of LEED certification. The handbook follows the rigorous third-party commissioning process, beginning with basic LEED concepts and then carefully explains LEED documentation and technical requirements along with its standards, professional accreditation, and codes. The handbook provides readers with design strategies for sustainable site selection and design process for high-performance building and commissioning. Other important topics include green materials and products selection as well as strategies for ensuring Indoor Environmental Quality (IEQ), water efficiency, and sanitary waste disposal. This handbook also offers readers a multitude of forms with expert guidance for their completion. Clear and authoritative in scope, *LEED Practices, Certification, and Accreditation Handbook* provides architects, builders, owners, construction managers, and engineers with a reference that will help them to offer their clients, peers, and the public at large compelling proof that they have achieved their projects' environmental goals and that the building is performing as designed. Includes instruction for completing LEED checklist and forms. Detailed explanation of the third-party commissioning process. Explains LEED documentation, technical requirements. Topics include green materials and products selection.

Standpipe Systems for Fire Protection Kenneth E. Isman, 2016-12-19. This important new manual goes beyond the published NFPA standards on installation of standpipe systems to include the rules in the International Building Code, municipal fire codes, the National Fire Code of Canada, and information on inspection, testing, and maintenance of standpipe systems. Also covered are the interactions between standpipe and sprinkler systems, since these important fire protection systems are so frequently installed together. Illustrated with design examples and practical applications to reinforce the learning experience, this is the go-to reference for engineers, architects, design technicians, building inspectors, fire inspectors, and anyone that inspects, tests, or maintains fire protection systems. Fire marshals and plan review authorities that have the responsibility for reviewing and accepting plans and hydraulic calculations for standpipe systems are also an important audience, as are firefighters who actually use

standpipe systems As a member of the committees responsible for some of these documents Isman also covers the rules of these standards and codes as they are written but also provides valuable insight as to the intent behind the rules A noted author and lecturer Professor Isman was an engineer with the National Fire Sprinkler Association NFSA is an elected Fellow of the Society of Fire Protection Engineers SFPE and currently Clinical Professor in the Department of Fire Protection Engineering at University of Maryland div
