Energy And Bulding Control Systems In The Tropics:

Energy and Bulding Control Systems in the Tropics (Penerbit USM) Sharifah Fairuz Syed Fadzil, Hugh Byrd, 2014-11 This book deals with both passive and active methods of controlling the environmental performance of buildings in hot tropical climates such as Malaysia In these climates the building fabric plays a crucial role in determining the indoor environment and maintaining reasonable thermal comfort Useful and practical examples from local case studies are used to illustrate solutions While the book is of a technical nature and based on academic research the language is suitable for both students and the general public The book offers a significant contribution towards the move to more sustainable energy efficient and green buildings It provides building designers with practical and simple solutions that are based on a sound understanding of building physics

Building Maintenance Technology in Tropical Climates Clive Briffett, 1995 The main objective of the book is to highlight the important problems in building maintenance technology broadly defined as the application of scientific principles to the care and preservation of building assets suggest how they may be overcome with special reference to tropical climates and encourage a greater participation of professionals in building maintenance work The contents cover a wide range of problems mostly derived from the experience of the writers with buildings located in Singapore and the South East Asia region These are dealt with under five general areas 1 Structure and Roof Systems 2 Finishing Systems 3 Natural Systems 4 Access Systems Building professionals property managers developers and others in the industry should find the book useful

Architecture, City, Environment Koen Steemers, Simos Yannas, 2000 PLEA is a network of individuals sharing expertise in the arts sciences planning and design of the built environment It serves as an international interdisciplinary forum to promote discourse on environmental quality in architecture and planning This 17th PLEA international conference addresses sustainable design with respect to architecture city and environment at the turn of the millennium The central aim of the conference is to explore the interrelationships and integration of architecture city and environment The Proceedings will be of interest to all those involved in bioclimatic design and the application of natural and innovative techniques to architecture and planning The conference is organised by the Martin Centre for Architectural and Urban Studies University of Cambridge and the Cambridge Programme for Industry University of Cambridge

Automation, Control and Energy Efficiency in Complex Systems Hamid Khayyam, 2020-12-22 This book is aimed at serving researchers engineers scientists and engineering graduate and PhD students of engineering and physical science together with individuals interested in engineering and science This book focuses on the application of engineering methods to complex systems including transportation building and manufacturing with approaches representing a wide variety of disciplines of engineering and science Throughout the book great emphases are placed on engineering applications of complex systems as well as the methodologies of automation including artificial intelligence automated and intelligent control energy analysis energy

modelling energy management and optimised energy efficiency The significant impact of recent studies that have been selected for presentation are of high interest in engineering complex systems An attempt has been made to expose the reading audience of engineers and researchers to a broad range of theoretical and practical topics The topics contained in the present book are of specific interest to engineers who are seeking expertise in transportation building and manufacturing technologies as well as mathematical modelling of complex systems engineering approaches to engineering complex problems automation via artificial intelligence methods automated and intelligent control and energy systems The primary audience of this book are researchers graduate students and engineers in mechanical engineering control engineering computer engineering electrical engineering and science disciplines In particular the book can be used for training graduate and PhD students as well as senior undergraduate students to enhance their knowledge by taking a graduate or advanced undergraduate course in the areas of complex systems control systems energy systems and engineering applications The covered research topics are also of interest to engineers and academia who are seeking to expand their expertise in these areas

NBS Special Publication, 1968 *Advances in Energy Recovery and Efficiency Technologies* Basel I. Abed Ismail, 2025-03-12 This book titled *Advances in Energy Recovery and Efficiency Technologies* presents and covers unique and interesting topics related to advances and innovations in energy recovery and energy efficiency technologies It is the result of contributions from a number of researchers and experts worldwide Energy recovery and efficiency technologies and methods aim to decrease energy wasted or unutilized in various energy conversion processes ultimately reducing the required energy input fuel and improving the overall energy efficiency of systems and energy conservation of natural energy resources These technologies once efficiently designed and their performances are optimized will potentially improve the economics and sustainability of systems as well as reduce their emissions air pollution and thermal energy waste discharged to the environment It is hoped that the book will become a valuable source of information and a basis for extended research for researchers academicians policymakers and practitioners in the area of energy recovery and energy efficiency technologies
