Sustainable Energy in Kazakhstan

Yelena Kalyuzhnova, Richard Pomfret, 2017-07-06 Kazakhstan is rich in natural resources including coal, oil, natural gas and uranium and has significant renewable potential from wind, solar, hydro and biomass. In spite of this, the country is currently dependent upon fossil fuels with coal fired plants accounting for 75% of total power generation, leading to concerns over greenhouse gas emissions and impacts on human health and the environment. This book analyses the implications of the global shift to cleaner energy for a country whose economy has centred on hydrocarbon exports. The challenge is urgent for Kazakhstan whose recent economic growth has driven increased demand for energy services, making the construction of additional generating capacity increasingly necessary for enabling sustained growth. In this context, renewable energy resources are becoming an increasingly attractive option to help bridge the demand supply gap. Chapters written by experts in the field provide a comprehensive review of the current energy situation in Kazakhstan, including fossil energy and renewable resources, and analyses policy drivers for the energy sector. Emphasising that clean energy covers a variety of renewables as well as cleaner use of hydrocarbons, this book argues that future technological change will affect the relative attractiveness of the various choices. Recognising technical, geographical and domestic and international political constraints on policymakers' options, this book will be of interest to an interdisciplinary audience in the fields of resource management and clean energy development, economics and Central Asian Studies.

Opportunities and Challenges in Climate-Friendly Clean Water and Energy Technologies Basha, J. Sadhik, Adewole, Jimoh Kayode, Yeneneh, Anteneh Mesfin, Abidoye, Luqman Kolawole, 2023-04-24

Demand for energy and water is increasing as a result of rapid economic population and industrial growth. By 2050, it is expected that global energy consumption will nearly double in tandem with world water demand. Because of competing demands for finite resources, existing water and energy systems are limited in their ability to satisfy these expanding needs. Furthermore, rapid population and industrial development inevitably result in the generation of a significant amount of wastewater laden with toxins, persistent inorganic and organic pollutants and other toxic emissions emitted from different sources. *Opportunities and Challenges in Climate Friendly Clean Water and Energy Technologies*

presents the most recent technological advancements that are relevant to environmentally friendly methods of producing clean water and a sustainable supply of energy In order to protect against climate change it also highlights the most recent empirical research findings in the field of cutting edge industrial and transportation emission reduction measures Covering key topics such as renewable energy wastewater treatment and biomaterials this reference work is ideal for environmental scientists industry professionals researchers practitioners academicians instructors and students *Wind Energy*
