Key Topics in Conservation Biology David Macdonald, Katrina Service, 2009-03-12 This important new book addresses key topics in contemporary conservation biology. Written by an internationally renowned team of authors, *Key Topics in Conservation Biology* explores cutting edge issues in modern biodiversity conservation including controversial subjects such as rarity and prioritization, conflict between people and wildlife, the human aspect of conservation, the relevance of animal welfare and the role of nongovernment organizations. *Key Topics* also tackles the management of wildlife diseases and examines the impact of bushmeat extraction and the role of hunting in the conservationist's toolbox. Other essays explore basic tools of conservation biology such as computer modeling, conservation genetics, metapopulation processes and the ingenious use of hi-tech equipment. Each topic is explored by three top international experts assembled to bring their cross-cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives. The interdisciplinary nature of biodiversity conservation is reflected throughout the book. Each essay examines the fundamental principles of the topic, the methodologies involved and crucially the human dimension. In this way, *Key Topics in Conservation Biology* embraces the issues from cutting edge ecological science to policy, environmental economics, governance, ethics and the practical issues of implementation. *Key Topics in Conservation Biology* will be a valuable resource in universities and colleges, government departments and conservation agencies. It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and those taking Masters degrees in any field relevant to conservation. Conservation practitioners, policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable.

Speciesism in Biology and Culture Brian Swartz, Brent D. Mishler, 2022-12-16 This open access book explores a wide ranging discussion about the sociopolitical, cultural and scientific ramifications of speciesism and world views that derive from it. In this light, it integrates subjects across the natural sciences, social sciences and humanities. The 21st century western world is anthropocentric to an extreme; we adopt unreasonably self-centered and self-serving ideas and lifestyles. Americans consume more energy resources per person than most other nations on Earth and have little concept of how human ecology and population biology interface with global sustainability. We draw upon religion, popular culture, politics and technology to justify our views and actions yet remain self-centered because our considerations rarely extend beyond our immediate interests. Stepping upward on the hierarchy from racism, speciesism likewise refers to the view that unique natural kinds, species exist and are an important structural element of biodiversity. This ideology manifests in the cultural idea that humans are distinct from and intrinsically superior to other forms of life. It further carries a plurality of implications for how we perceive ourselves in relation to nature, how we view Judeo-Christian religions and their tenets, how we respond to scientific data about social problems such as climate change and how willing we are to change our actions in the face of evidence.

Biosciences on the Internet Georges Dussart,2003-01-24 Most biological science departments run general skills courses for their first years which include some combination of a range of topics from lab skills writing and presentation to basic maths statistics and IT The IT section of these courses tend to include some internet coverage but the trend towards learning how to find access manage and

correctly cite online resources is rapidly becoming a required necessity for every student throughout their undergraduate career. At present there are no internet guides that specifically target this audience despite the increasing importance placed on the use of online resources and the difficulties students encounter trying to make effective use of the information that is available. There are a lot of resources on the internet and students especially first years can feel swamped. As well as needing a guide, students need support to help them identify good reliable information on the net. They also need guidance in administering the organisation of their searches and the materials that they discover on the internet. This simple guide will help bioscience students to access the information they need on the internet and to make the most efficient and effective use of their time online.
