Visual Information Retrieval Using Java and LIRE Mathias Lux,Oge Marques,2022-05-31 Visual information retrieval VIR is an active and vibrant research area which attempts at providing means for organizing indexing annotating and retrieving visual information images and videos from large unstructured repositories The goal of VIR is to retrieve matches ranked by their relevance to a given query which is often expressed as an example image and or a series of keywords During its early years 1995 2000 the research efforts were dominated by content based approaches contributed primarily by the image and video processing community During the past decade it was widely recognized that the challenges imposed by the lack of coincidence between an image s visual contents and its semantic interpretation also known as semantic gap required a clever use of textual metadata in addition to information extracted from the image s pixel contents to make image and video retrieval solutions efficient and effective The need to bridge or at least narrow the semantic gap has been one of the driving forces behind current VIR research Additionally other related research problems and market opportunities have started to emerge offering a broad range of exciting problems for computer scientists and engineers to work on In this introductory book we focus on a subset of VIR problems where the media consists of images and the indexing and retrieval methods are based on the pixel contents of those images an approach known as content based image retrieval CBIR We present an implementation oriented overview of CBIR concepts techniques algorithms and figures of merit Most chapters are supported by examples written in Java using Lucene an open source Java based indexing and search implementation and LIRE Lucene Image REtrieval an open source Java based library for CBIR Table of Contents Introduction Information Retrieval Selected Concepts and Techniques Visual Features Indexing Visual Features LIRE An Extensible Java CBIR Library Concluding Remarks   Practical Java Machine Learning Mark Wickham,2018-10-23 Build machine learning ML solutions for Java development This book shows you that when designing ML apps data is the key driver and must be considered throughout all phases of the project life cycle Practical Java Machine Learning helps you understand the importance of data and how to organize it for use within your ML project You will be introduced to tools which can help you identify and manage your data including JSON visualization NoSQL databases and cloud platforms including Google Cloud Platform and Amazon Web Services Practical Java Machine Learning includes multiple projects with particular focus on the Android mobile platform and features such as sensors camera and connectivity each of which produce data that can power unique machine learning solutions You will learn to build a variety of applications that demonstrate the capabilities of the Google Cloud Platform machine learning API including data visualizationfor Java document classification using the Weka ML environment audio file classification for Android using ML with spectrogram voice data and machine learning using device sensor data After reading this book you will come away with case study examples and projects that you can take away as templates for re use and exploration for your own machine learning programming projects with Java What You Will Learn Identify organize and
