*Type 2 Diabetes* Robert Fried, Richard M. Carlton, 2018-10-25 Approximately 29 million Americans are diagnosed with Type 2 diabetes annually Of that number only about 36 percent 10 44 million diabetes sufferers achieve satisfactory medical outcomes and would need additional help rarely available to reliably control their glucose levels Contrary to popular belief although anti diabetic medications can lower sugar levels nevertheless they have a poor performance track record because inflammation in the blood vessels persists This book details recent scientific findings that cardiovascular kidney vision peripheral nervous system and other body damage caused by chronic high levels of blood sugar hyperglycemia in Type 2 diabetes is actually due to excessive generation of unopposed free radicals and reactive oxygen species ROS These in turn cause chronic systemic inflammation and dysfunction of the endothelial lining of the arterial blood vessels jeopardizing the formation of the protective molecule nitric oxide NO thus severely impairing the blood supply to every organ and tissue in the body This book also catalogues the evidence that chronic hyperglycemia causes profound and often irreversible damage even long before Type 2 diabetes has been diagnosed In addition because conventional prescription treatments are unfortunately often inadequate the book details evidence based complementary means of blood sugar control

**Anticarbohydrate Antibodies** Paul Kosma, Sven Müller-Loennies, 2011-11-27 Many pathogens and aberrant malignant cells express unique carbohydrates on their surface representing attractive targets for vaccine design Considerable progress has recently been made in the identification of novel carbohydrate based vaccines and a large number has reached clinical phase studies The success of several licensed carbohydrate based vaccines against bacterial pathogens such as Haemophilus influenzae type b Neisseria meningitidis or Streptococcus pneumoniae demonstrates their great potential However the study of anti carbohydrate antibodies is technically challenging and partly because of low affinities and promiscuous specificity they have not been medically exploited to full potential The study of antibody specificities and identification of protective carbohydrate epitopes lies at the heart of successful vaccine design In addition to therapy antibodies in general serve as diagnostic tools in medical and scientific laboratories In this setting high affinity and exquisite specificity are important factors for their successful use

*Anticarbohydrate Antibodies* from molecular basis to clinical application compiles current knowledge on the immunological recognition of carbohydrates by the adaptive immune system from a molecular perspective providing fundamental insight needed for advancing clinically relevant diagnostics and therapeutic applications Based on significant progress in the fields of glycoimmunology and structural biology in recent years the book comprehensively reviews the state of the art in defining

the key elements of carbohydrate recognition by antibodies the molecular mimicry of carbohydrate epitopes as well as the molecular features leading to specific and relaxed binding modes Backed up by a combination of modern technologies to elucidate structural details of carbohydrate antibody interactions biomedically important carbohydrate antigens from viral bacterial parasite insect and tumor cells have been analyzed in in depth reviews written by well known experts in the field Fundamental knowledge of these molecular mechanisms eventually provides a rational basis to improve efficacy of carbohydrate based vaccines and to further refine diagnostic tools in detection of pathogens and malignant cells **The**
