DT 400T series motion sensors combine two technologies into one small, attractive package. Within a defined area, the microwave detector senses motion, and the passive infrared (PIR) detector responds to radiant body heat (infrared energy emitted by an intruder).

DT 400T sensors also feature a new **TURBO** circuit which provides more protection against false alarms than ever before. The **TURBO** circuit allows the microwave to "idle" until the PIR detects a change in infrared energy.

When the PIR detects a change in infrared energy, the microwave instantly becomes "alert." If it detects motion within a specific time period, the sensor will alarm. Because both technologies must verify intrusion at or about the same time, false alarms are virtually eliminated.

In addition, DT 400T sensors are equipped with a supervision circuit that constantly monitors the microwave technology. If a problem is detected, the sensors will electronically signal an alarm to the control panel.

DT 400T sensors are also among the first to have both a Fresnel lens and multi-segmented PIR mirror. This unique optical system provides dense PIR coverage from directly beneath the unit (sabotage zones) to maximum range.

FEATURES

- Dual microwave/PIR technology
- New **TURBO** circuit
- Dual element PIR
- Microwave supervision
- Unique PIR optics
- Single edge PIR triggering
- Low 25 mA current draw at 12 VDC
- 8.5 - 16 VDC operation (UL: 9 - 14 VDC)
- Exposed LEDs
- Enhanced run-through detection
- Automatic temperature compensation
- Energized Form A alarm relay DT 430T, DT 435T, DT 435TC
- Energized Form C alarm relay DT 450T, DT 450TC
- Shorter reset times
- Optional barrier and pet-alley lenses available.

MOUNTING LOCATION

Select the best location in the room for both technologies. If possible, aim the sensor toward the interior of the room, away from windows, moving machinery, and heating/cooling sources.

Maximum range is obtained at a mounting height of 7'6" (2.3 m). Make sure the sensor has a clear line of sight to all areas you wish to protect. Infrared radiation cannot penetrate solid objects. If the PIR is blocked, the unit will not alarm.

MOUNTING PROCEDURE

To remove the sensor's front cover, use a small screwdriver to push down on the latch at the top of the unit, while separating the housing parts.

To remove the printed circuit board (PCB), lift up on the latch at the top of the unit, while using the microwave antenna to gently pull the PCB forward.

Securely mount the rear housing at the desired location. When mounting the sensor on a wall, use the two keyholes in the back of the rear housing. When mounting the sensor in a corner, use the breakout tabs on the beveled corners of the unit. A swivel mount bracket (Model DT-45W) is also available from C&K Systems.

WIRING

Observing the proper polarity, wire the sensor as shown below. Do not leave excess wire inside the unit. Push as much of the wire as possible back into the wall when returning the PCB to its housing.

CHANGING THE FRESNEL LENS

To change the Fresnel lens, remove the sensor's front cover.

Next remove the lens retainer by depressing the retainers brackets on either side of the lens retainer.

Take out the existing lens, and put the new one in with the **SMOOTH** side facing outward. Install the lens with the small slot at the top. The large slot on the bottom of the lens should be seated over the tab on the bottom of the front cover.

Snap the lens retainer back into place, then re-assemble the housing.

NOTE: Two additional lenses are available for these sensors. The pet-alley lens blocks lower PIR zones to exclude pets from the field of view; the barrier lens blocks outer zones for narrower applications. When the pet-alley lens is used, install a look-down mask (provided) over the inside of the look-down window, and make sure to mount the sensor at a height of 4'.

The optional lenses are available at no charge from your local distributor, or call C&K Systems, Inc. at (800) 227-8000. Order Part Number C-000-400-03.

SYSTEM TESTING

All the walk-test LEDs are located at the bottom, left side of the unit. DT 400T sensors are equipped with two diagnostic LEDs: green for PIR and yellow for microwave. The red LED is used to indicate an alarm condition.

Apply power to the sensor and let it warm up for at least three minutes. Begin walk-testing after all three LEDs have gone out.

RANGE ADJUSTMENT

A range thumbwheel for the microwave is located at the upper left edge of the PCB (R53). When the PCB is oriented in the correct mounting position, and you are facing it, turning the thumbwheel toward the bottom of the PCB will **INCREASE** the range of the microwave. Refer also to the label posted on the microwave antenna.

Before walk-testing the sensor, set the microwave range thumbwheel at **MINIMUM** by turning it toward the top of the PCB (as far as it will go). Then, as you perform the walk-test, gradually increase the sensitivity of the microwave until the desired range is obtained.

PIR range is determined by the mounting height and angle, or by masking specific PIR zones.
