

## The Retrograde Motion of Mars

1) On what days does Mars start and end the retrograde motion? (First Observation)

Starts early March

Ends early October

2) On what days does Mars start and end the retrograde motion? (Second Observation)

December 23rd

March 18th

3) Explain why Mars appears to undergo retrograde motion.

Retrograde motion is the apparent change in direction of Mars as seen from Earth. This occurs because Mars is further out in the solar system than Earth. As Earth orbits the Sun, it moves faster than Mars. When Earth passes Mars, it appears as if Mars is moving backward relative to the background stars.

4) Explain why we see Mars and not some of the Jovian planets for this motion.

The Jovian planets are much further away and their orbits take longer, so the retrograde motion would be harder to readily see.
