**Renewing Our Rivers** Mark K. Briggs, Waite R. Osterkamp, 2021-01-05 Our rivers are in crisis and the need for river restoration has never been more urgent. Water security and biodiversity indices for all of the world's major rivers have declined due to pollution, diversions, impoundments, fragmented flows, introduced and invasive species, and many other abuses. Developing successful restoration responses are essential. *Renewing Our Rivers* addresses this need head-on with examples of how to design and implement stream corridor restoration projects. Based on the experiences of seasoned professionals, *Renewing Our Rivers* provides stream restoration practitioners the main steps to develop successful and viable stream restoration projects that last. Ecologists, geomorphologists, and hydrologists from dryland regions of Australia, Mexico, and the United States share case studies and key lessons learned for successful restoration and renewal of our most vital resource. The aim of this guidebook is to offer essential restoration guidance that allows a start-to-finish overview of what it takes to bring back a damaged stream corridor. Chapters cover planning such emerging themes as climate change and environmental flow, the nuances of implementing restoration tactics, and monitoring restoration results. *Renewing Our Rivers* provides community members, educators, students, natural resource practitioners, experts, and scientists broader perspectives on how to move the science of restoration to practical success.

**Life-Cycle of Structures Under Uncertainty** Dan M. Frangopol, Sunyong Kim, 2019-07-25 Life cycle analysis is a systemic tool for efficient and effective service life management of deteriorating structures. In the last few decades, theoretical and practical approaches for life cycle performance and cost analysis have been developed extensively due to increased demand on structural safety and service life extension. This book presents the state of the art in life cycle analysis and maintenance optimization for fatigue sensitive structures. Both theoretical background and practical applications have been provided for academics, engineers, and researchers. Concepts and approaches of life cycle performance and cost analysis developed in recent decades are presented. The major topics covered include: a) probabilistic concepts of life cycle performance and cost analysis; b) inspection, monitoring, and maintenance for fatigue cracks; c) estimation of fatigue crack detection; d) optimum inspection and monitoring planning; e) multi-objective life cycle optimization; and f) decision making in life cycle analysis. Life cycle optimization covered in the book considers probability of fatigue crack detection, fatigue crack damage, detection time, maintenance times, probability of failure, service life, and total life cycle cost. For the practical application and integration of recently developed approaches for inspection and maintenance planning, efficient and effective multi-objective optimization and decision making are presented. This book will help engineers engaged in civil and marine structures, including students, researchers, and practitioners, with reliable and cost-effective maintenance planning of fatigue sensitive structures and to develop more advanced approaches and techniques in the field of life cycle maintenance optimization and safety of structures under various aging and deteriorating conditions.

**Key Features:** Provides the state of the art in life cycle cost analysis and optimization for fatigue sensitive structures. Provides a
