Math Stories High School:

Math Stories For Problem Solving Success James L. Overholt, Nancy H. Aaberg, James Lindsey, 2008-03-07 This second edition of the popular math teaching resource book *Math Stories for Problem Solving Success* offers updated true to life situations designed to motivate teenagers to use math skills for solving everyday problems. The book features intriguing short stories followed by sets of problems related to the stories that are correlated to the standards of the National Council of Teachers of Mathematics. Each of the easy to read stories is followed by three increasingly difficult groups of problem sets. This makes it simple for teachers to select the appropriate problem set for students of different abilities and at different grade levels. To further enhance student involvement the stories feature recurring characters and can be used either sequentially or out of order. The problems in the book cover many basic math topics including decimals, fractions, and percents, measurement, geometry, data, statistics, and probability, algebra, and problem solving. In addition to having all the answers, an Answer Key at the end of the book offers explanations and background information about the problems that can be helpful to both teachers and students. *Math Stories for Problem Solving Success* will help you show students that math is something they are already using every day.

Math Therapy™ Vanessa Vakharia, 2024-08-08 Anything is possible even building a better relationship with math. This is much more than a book about math. This is a book about hope. Imagine failing 11th grade math twice and going on to be known affectionately as The Lady Gaga of Math. That is the story of author Vanessa The Math Guru Vakharia. Thanks to an inspiring teacher who helped Vanessa heal her own relationship with math, Vanessa was then able to see math in a way that literally changed the trajectory of her life. Most people have experienced math trauma at least once, but by early mid elementary school many students have gotten the message that either they are a math person or they are not. In *Math Therapy™*, Vanessa shows that with the right tools and strategies, teachers can foster a culture in which every student is capable of building a better relationship with math and with themselves. Through the five Ms of *Math Therapy™*: Mythbust, Moderate, Motivate, Makeover, and Measure, teachers can help their students overcome math trauma, cultivate a positive math identity, and develop a mathematical mindset. Written in a fun and conversational style and grounded in research on math education and neuropsychology, this book provides practical hands-on strategies and tools that make it easy and fun for teachers to implement each step of *Math Therapy™* in their classroom. Helps teachers unpack their own math history before diving in to what they can do to help their students. Addresses the trauma-induced stumbling blocks that many students face when tackling mathematics. Includes humorous and engaging real-life vignettes from celebrating Pi Day by visiting a prison to setting off a confetti cannon to celebrate a student's milestone to the time Vanessa's band opened for Bon Jovi and more. Much more than a book about helping students kick butt in math class, this book is about empowering students to develop the skills they need to live a life in which they truly believe that anything is possible even a better relationship with math.

Inventing the Mathematician Sara N. Hottinger, 2016-03-01. Considers how our ideas about mathematics shape our individual and cultural relationship to the field. Where and how do we as a culture get our ideas about mathematics and about who can engage with mathematical knowledge? Sara N. Hottinger uses a cultural studies approach to address how our ideas about mathematics shape our individual and cultural relationship to the field. She considers four locations in which representations of mathematics contribute to our cultural understanding of mathematics: mathematics textbooks, the history of mathematics, portraits of mathematicians, and the field of ethnomathematics. Hottinger examines how these discourses shape mathematical subjectivity by limiting the way some groups, including women and people of color, are able to see themselves as practitioners of math. *Inventing the Mathematician* provides a blueprint for how to engage in a deconstructive project revealing the limited and problematic nature of the normative construction of mathematical subjectivity.
