**Abstract**—The Department of Geography and City Studies at York University has been the subject of a long-standing tradition of collaboration with a wide range of community groups. A community map project at York University was initiated in 1990, resulting in the production of a map of the city of York, Ontario, Canada, which was then used by the community groups to plan and implement various projects.

The goal of transdisciplinary studies groups, with some very different quality of activity, is the study of integrated, cross-disciplinary natural environmental science, forestry, administration, and such as working towards the more related fields mentioned above.

As reported in our 1986 study, a significant decline in response rate (from 70 to 40%) was observed in the 1987 study. In 1987, the response rate was 40% for the 1986 study, 30% for the 1985 study, and 20% for the 1984 study. The response rate for the 1986 study was 40% for the 1985 study, 30% for the 1984 study, and 20% for the 1983 study.

Finally, through following up, we argue that community-based interventions consistently will not succeed by themselves and alone. The community is connected to broader society and must have links.

It is important to note that the study was not designed to establish a causal relationship between the variables. The study was designed to explore the relationship between the variables and to provide a basis for further research.

It is important to have someone who can do both and agree that the necessary resources are sufficient to deliver both and that distance learning will always be a part of the business model.
