Read the manual carefully to learn how to use each tool and service your machine properly. Failure to do so could result in personal injury or machine damage.

This manual should be considered a normal part of your machine and should remain with the machine when you sell it.

The machine is of course single channel, and its outputs are noisy. The only more powerful and more accurate

Significant and additional data are presented in Table 1 in the Appendix. A recent study

While product identification numbers in the clearing markets section, denoted by a small "i" in the system, is helpful in locating the position, it is not ideal. You should also check these numbers when you enter orders. If the number is high in the clearing, that's the confirmation. You'll have a better idea of the position.

Warning is provided as part of the firm's expert report to be included into court and subject for approval as evidence in the lawsuit. The warning is included in the expert's certificate and is signed by the expert and the firm.

The warranty provides you the assurance that should you find the product under repair within the warranty period, it will be replaced. However, there are several conditions that apply. For example, the warranty does not cover the product if it is not used properly. Should the equipment be abused, or needed to change its performance beyond the original factory specifications, the warranty will become void and your best recourse may be to seek out a local "tune-up" store specialized in otherwise compromising electronic equipment and services.

Only qualified, experienced operators, strictly trained according to local law, should be allowed to operate the machine. Moreover, only strictly trained personnel should be allowed to inspect, correct the machine.

All information, figures and specifications in this manual are based on the latest product information available at the time of publication. This will be corrected to cover changes as they come to light.

Regenerating British Columbia's Forests R. Parish,C. M. Johnson,G. Montgomery,A. Vyse,R. A. Willis,D. Winston,D.P. Lavender,2011-11-01 Reforestation is a subject vital to the economy of British Columbia which depends heavily on its forests a valuable but expendable resource This book provides silviculturalists with a broad reference to the science and technology of reforestation in the Canadian province that forms the single most diverse forest region in North America The work combines for the first time both experiences recorded from practical reforestation projects and the results of scientific investigations The chapters of *Regenerating British Columbia's Forests* were compiled and reviewed by experts in each field of discussion Topics include the physiological bases for seedling vigour and the interaction

of reforestation with seedling physiology the ecology of British Columbia's bioclimatic zones and the role of ecological site classification the application of financial analyses to reforestation decisions current technology in manual mechanical and chemical site preparation and in the use of fire to prepare planting sites recent progress in tree genetics and breeding and its relevance to the production of tree propagules nursery technology methodology in planting evaluation techniques of plantation release and the role of insects disease and small mammals and birds in the reforestation process Regenerating British Columbia's Forests will assist those responsible for planning reforestation projects to reach informed decisions and will challenge them to consider primarily the biological factors basic to reforestation success rather than short term costs and production technology Although its main audience is practising foresters and forestry students of British Columbia the text will be of considerable interest to foresters in other parts of Canada the United States and Europe who manage reforestation

Cusumano,1991-05-16 Though Japan has successfully competed with U S companies in the manufacturing and marketing of computer hardware it has been less successful in developing computer programs This book contains the first detailed analysis of how Japanese firms have tried to redress this imbalance by applying their skills in engineering and production management to software development Cusumano focuses on the creation of software factories in which large numbers of people are engaged in developing software in cooperative ways i.e individual programs are not developed in isolation but rather utilize portions of other programs already developed whenever possible and then yield usable portions for other programs being written Devoting chapters to working methods at System Developing Corp Hitachi Toshiba NEC and Fujitsu and including a comparison of Japanese and U S software factories Cusumano's book will be important reading for all people involved in software and computer technology as well as those interested in Japanese business and corporate culture
