Goldstein,2014-10-07 For a long time World War I has been shortchanged by the historiography of science Until recently World War II was usually considered as the defining event for the formation of the modern relationship between science and society In this context the effects of the First World War by contrast were often limited to the massive deaths of promising young scientists By focusing on a few key places Paris Cambridge Rome Chicago and others the present book gathers studies representing a broad spectrum of positions adopted by mathematicians about the conflict from militant pacifism to military scientific or ideological mobilization The use of mathematics for war is thoroughly examined This book suggests a new vision of the long term influence of World War I on mathematics and mathematicians Continuities and discontinuities in the structure and organization of the mathematical sciences are discussed as well as their images in various milieux Topics of research and the values with which they were defended are scrutinized This book in particular proposes a more in depth evaluation of the issue of modernity and modernization in mathematics The issue of scientific international relations after the war is revisited by a close look at the situation in a few Allied countries France Britain Italy and the USA The historiography has emphasized the place of Germany as the leading mathematical country before WWI and the absurdity of its postwar ostracism by the Allies The studies presented here help explain how dramatically different prewar situations prolonged interaction during the war and new international postwar organizations led to attempts at redrafting models for mathematical developments

Rospigliosi,2014-11-07 **Sir George Dyson** Paul Spicer,2014 The story of a fascinating controversial man who influenced almost every sphere of musical life in Britain and helped to change the face of music performance and education in this country George Dyson 1883 1964 was a highly influential composer educator and administrator whose work touched the lives of millions Yet today apart from his Canterbury Pilgrims and two sets of canticles for Choral Evensong his music is little known In this comprehensive and detailed study based not only on Dyson's own writings but on unpublished papers personal correspondence and interviews with his family and friends Paul Spicer brings this remarkable man and his lyrical passionate and engaging music to life once more Born into a working class family in Halifax West Yorkshire he rose from humble beginnings to become the voice of public school music in Britain and Director of the RCM As a scholarship student he met

and studied with some of the leading musicians of the day including Sir Charles Villiers Stanford and Sir Hubert Parry. He went on to work in some of the country's greatest schools where he established his reputation as a composer particularly of choral and orchestral works of which *Quo Vadis* was his most ambitious. A member of the BBC Brains Trust panel, Dyson was also the voice of music on the radio for a number of years and helped to educate the nation through his regular broadcasts. A fascinating, controversial man, George Dyson touched almost every sphere of musical life in Britain and helped to change the face of music performance and education in this country. This seminal book examining every aspect of his long, colourful career re-establishes him as the towering figure he undoubtedly was in his time.

PAUL SPICER was a composition student of Herbert Howells whose biography he wrote in 1998. He is well known as a choral conductor especially of British Music of the twentieth century onwards, a writer, composer, teacher and producer.

Noncooperative Approaches to the Theory of Perfect Competition Andreu Mas-Colell, 2014-05-10

Economic Theory, Econometrics and Mathematical Economics: A Series of Monographs and Textbooks

Noncooperative Approaches to the Theory of Perfect Competition focuses on the application of noncooperative approaches to the theory of perfect competition, including Cournot game, no surplus condition, and Nash equilibria. The selection first elaborates on collusive behavior in noncooperative epsilon equilibria of oligopolies with long but finite lives and noncooperative price taking in large dynamic markets. Discussions focus on noncooperative equilibria which support the monopoly allocation, alternative definition of perfect epsilon equilibrium, one period Cournot game, fixed demand case, and replication case. The book takes a look at noncooperative price taking in large dynamic markets, no surplus condition as a characterization of perfectly competitive equilibrium, perfect competition profit criterion, and the organization of economic activity. Topics include profits to individually improving welfare, structure of firms, competitive allocations as no surplus allocations, profits as rents, Walrasian and perfectly competitive equilibrium, and no surplus and core equivalence as alternative characterizations of perfectly competitive equilibrium. The manuscript ponders on Nash equilibria of market games and efficiency properties of strategic market games, as well as commodities, agents, assignments, strategic markets, games proper, and full Cournot Nash equilibria and finiteness and inefficiency. The selection is a valuable source of data for researchers interested in noncooperative approaches to the theory of perfect competition.
