*Individual and Social Influences on Professional Learning* Hans Gruber, Christian Harteis, 2018-11-01 This book examines professional learning and relates it to the acquisition of expertise and the influence of individuals Professional learning as discussed in the book comprises all kinds of occupational domains because employment and paid work usually follow the achievement principle i.e. workers are expected to perform efficiently The book suggests that the perspective of expertise research is an appropriate lens to use for gaining insight in how individuals can be prepared and enabled to autonomously master the requirements of daily working life Expertise is understood as the capacity to reliably perform on an extraordinary level and the basic assumption is that experts are best prepared to successfully cope with future challenges at workplaces The book comprehensively discusses issues of expertise research and explores the nature of a successful individual and an impeded individual It proposes an integrated model of individual and social components of expertisedevelopment the i PPP model The model provides insight in and an understanding of how individuals can be enabled to develop and maintain professional expertise in the context of daily work Across all paradigms researchers policy makers employers and trade unionists agree that working conditions undergo permanent change through economic societal and technological developments Recently the digitalisation of working life became a hot topic of scientific and societal discourses Workplaces thus provide challenges for individuals who have to be able to cope with workplace changes Accordingly new challenges

emerge for an adequate understanding of learning for work as well as learning during work      Scientific and Technical Aerospace Reports ,1989      *Signal* ,2007      Using Think-Aloud Interviews and Cognitive Labs in Educational Research

Jacqueline P. Leighton,2017-01-17 The field of education is rife with calls to action and for research to improve higher level thinking and learning outcomes in primary secondary and tertiary education With the No Child Left Behind Act and even more recently the Every Student Succeeds Act policymakers are acknowledging the need for accountability and for an education system that works for everyone Thankfully psychologists and educators are coming together to share best methods for how to design better learning environments assessments and tests but are also probing learners for how they process the content material with which they are faced Jacqueline P Leighton s Using Think Aloud Interviews and Cognitive Labs in Educational Research provides the first volume focused on distinguishing related but specific methods for probing these distinct forms of student cognition Unlike volumes focused on interview techniques for questionnaire design and analysis this book builds on the seminal 1993 work of psychologists K Anders Ericsson and Herbert A Simon for using think aloud and protocol analysis to generate evidence of student problem solving in education while also distinguishing this work from cognitive interviews used to generate evidence of human understanding comprehension within the educational and psychological settings Here Leighton not only presents the theoretical basis for the two interview and analytical techniques but also advances how to use cognitive models in the planning of interviews collecting data training those who work with this data and generating evidence for claims about higher level thinking and learning Using Think Aloud Interviews and Cognitive Labs in Educational Research includes sample instructions cautions and schematic visuals to help readers identify these distinct procedures while also integrating the work with established standards such as the 2014 Standards for Educational and Psychological Testing published by the American Educational Research Association the National Council on Measurement in Education and the American Psychological Association      **Common Factors in Couple and Family**
