Children Communicating Beth Bonniwell Haslett,Wendy Samter,2020-07-24 Offering a unique focus on the development of human communication this book integrates and synthesizes a more comprehensive array of research than most investigations of communicative development As such it incorporates materials dealing with the development of nonverbal communication language and cognition and examines how

they are integrated in the growing child's everyday interaction. This information is distilled into a set of key principles and practices culled from a variety of fields including developmental and social psychology, sociolinguistics, psycholinguistics, and communication for parents or adults interested in child development. While this book does not offer an in-depth view in any one area, it provides a comprehensive overview of the various components of human communicative development and its significance for the child's cognitive and emotional growth. It is quite clear that developmental processes are constrained by multiple influences whose interactions have just begun to be uncovered. Examining the diverse facets of communicative development will enable professionals to garner further insights into the mystery of human communication.

Touch Screen Tablets Touching Children's Lives Joanne Tarasuik, Gabrielle Strouse, Jordy Kaufman, 2018-02-28. Touch screen tablets have greatly expanded the technology accessible to preschoolers, toddlers, and even infants, given that they do not require the fine motor skills required for using traditional computers. Many parents and educators wish to make evidence-based decisions regarding young children's technology use, yet technological advancements continue to occur faster than researchers can keep up with. Accordingly, despite touch screen tablets entering society more than 5 years ago, we are in the infancy of research concerning interactive media and children. The topic has gained traction in the past couple of years. For example, theoretical papers have discussed how interactive media activities differ from physical toys and passive media (Christakis, 2014) and how educational apps development should utilize the four pillars of learning (Hirsh-Pasek et al., 2015). Yet there has been little experimental research published on young children and touch screen use.
