

Gene and Chromosome Mutation Worksheet (reference pgs. 239-240 in *Modern Biology* textbook)

Name _____ Date _____ Per _____

Look at the diagrams, then answer the questions.

Gene Mutations affect a single gene by changing its base sequence, resulting in an incorrect, or nonfunctional, protein being made.

(a) A **SUBSTITUTION** mutation, occurs where one nucleotide base is replaced by another. These are often called "**point mutations**", because a **single base** is changed, at one **point** in the gene.

SOMETIMES, these base (A,T,C,G) substitutions lead to "**Missense**" or "**Nonsense**" mutations:

...ACT CAG AAC...
...Thr Gln Asn...

...ATA CGA GCT...
...Ile Arg Ala...

...ACT CGG AAC...
...Thr Arg Asn...

...ATA TGA GCT...
...Ile Stop...

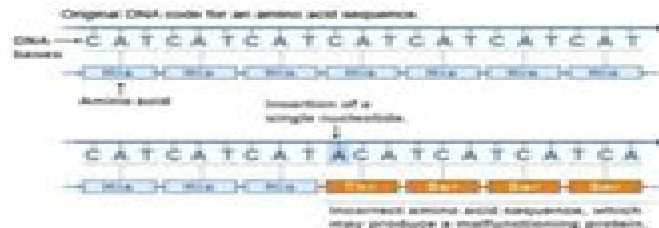

...and sometimes, because there is more than one codon for each amino acid, these mutations can be **SILENT**:

...TTC TGT AGT GGT...
...Phe Cys Ser Gly...

...TTC TGC AGT GGT...
...Phe Cys Ser Gly...

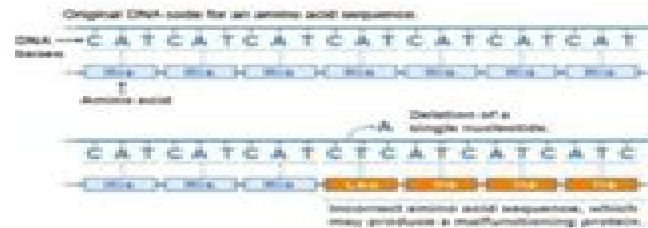

(b) Other types of mutations (**insertions or deletions** of nucleotide bases) cause **FRAMESHIFTS**:

Nimer Abu Shihab,2012-03 These days hardly a week goes by in the media without mention of a remarkable advancement in the field of genetics Cytogenetics is a branch of genetics that is concerned with the study of the structure and function of the chromosomes and their role in heredity Every individual inherits a pair of chromosomes from each of his parents Each cell in our body has 46 chromosomes each Chromosomes carry genetic information in the form of genes The genes within the chromosomes have a powerful impact on our health either directly through chromosomal or single gene disorders or by influencing our susceptibility to disease Cytogenetic study is performed in order to diagnose certain genetic disorders such as congenital birth defects mental retardation growth and developmental delay defects of sexual development ambiguous genitalia congenital defects abnormal facial features infertility multiple miscarriages amenorrhea autism malignancies and hematological disorders early embryonic death and gene mutations among others These can be identified by chromosomal analysis and molecular cytogenetic techniques such as Fluorescent in Situ Hybridization FISH and Microarray which have enormously expanded in recent years *Chromosome Mutations* M. S. Sasaki,H. Takebe,1982 **Mutation Breeding** S.S Purohit,S.S.,2010-01-01 Mutation means a sudden phenotypic change in a character of an individual not due to crossing or segregation or an alteration in the macro molecule of DNA where it remains open whether the alteration leads to a change in gene function or not It also means the augmentation of genetic material through nucleotide or gene copies through additional individual chromosomes as well as through the multiplication of whole genomes towards polyploidy Plant breeding requires genetic variation of useful traits for crop improvement Often however desired variation is lacking Mutagenic agents such as radiation and certain chemicals then can be used to induce mutations and generate genetic variations from which desired mutants may be selected Therefore mutation breeding means 1 The phenotypic alteration and 2 The various underlying molecular and numerical changes But in any case a mutation has to be phenotypically expressed to be selectable all other mutations are only of scientific interest The present book includes the chapters like Mutation General concepts Mutation The Molecular Basis Mutation Variation in chromosome number and structure plant breeding using mutations induced mutation and plant breeding techniques of mutation breeding plant biotechnology mutation and breeding somaclonal and gametoclonal variant selection techniques of induced mutation and new cultivars developed by mutation breeding In the end selected references have been appended Mutations O. Oud,G. Rickards,UNESCO,2003-01-01 This CD ROM puts together a comprehensive program in which the types origins and consequences of both gene DNA and chromosome mutations are introduced It illustrates the effects both short term such as cancer inborn mutations and disease and long term those of evolutionary importance It also includes animation a large number of photographs and illustrations of humans animals and plants
