The Objective Monitoring of Physical Activity: Contributions of Accelerometry to Epidemiology, Exercise Science and Rehabilitation Roy J.

Shephard, Catrine Tudor-Locke, 2016-08-02 This book examines the new knowledge that has been gained from the objective monitoring of habitual physical activity by means of pedometers and accelerometers. It reviews current advances in the technology of activity monitoring and details advantages of objective monitors relative to physical activity questionnaires. It points to continuing gaps in knowledge and explores the potential for further advances in the design of objective monitoring devices. Epidemiologists have studied relationships between questionnaire assessments of habitual physical activity and various medical conditions for some seventy years. In general they have observed positive associations between regular exercise and good health but because of inherent limitations in the reliability and accuracy of physical activity questionnaires optimal exercise recommendations for the prevention and treatment of disease have remained unclear. Inexpensive pedometers and accelerometers now offer the epidemiologist the potential to collect relatively precisely graded and objective information on the volume, intensity and patterns of effort that people are undertaking to relate this data to past and future health experience and to establish dose response relationships between physical activity and the various components of health. Such information is important both in assessing the causal nature of the observed associations and in establishing evidence based recommendations concerning the minimal levels of daily physical activity needed to maintain good health.

Interfaces and Us Zachary Kaiser, 2023-01-12 We're all familiar with smart TVs making suggestions on our future watching, real world exercise data being transferred into stats and infographics on our workout apps, and turning up our home heating before we start our commute, but how does this world of technological interfaces affect our actions and perceptions of self? When society relies on computer models and their interfaces to explain and predict everything from love to geopolitical conflicts, our own behaviour and choices are artificially changed. Zachary Kaiser explores the harmful social consequences of this idea, balanced against speed and ease for the user, and how design practice and education can respond positively. Concepts of freedom vs convenience, smart objects and manipulation, real world information transformed into data, Technology's decisions made on our behalf. *Needy Media* Stephen Monteiro, 2025-10-16 What makes our portable networked personal media devices, smartphones, tablets, smartwatches, so irresistible? Reacting to our touch, voice or gaze, seizing and keeping our attention with sounds, vibrations and screen prompts, these objects construct an animated intimacy that builds trust and emotional dependence. *Needy Media* explores how features such as face recognition, awareness sensors

and touchscreens have developed and intersected tying them to key concepts of psychology language and the body Surveying products and practices across a half century Stephen Monteiro argues that the appeal is as much about how media devices behave as it is about the information they convey Monteiro traces a symbiotic overreliance a neediness between users and devices fostered by personalized aspects of digital materiality The physical and emotional bonds that emerge he argues not only cast our devices as loyal companions adaptable to our needs and idiosyncrasies they also facilitate the corporate harvesting of massive amounts of personal data in the name of making technology more friendly intuitive and individualized Raising important questions about privacy and power Needy Media seeks answers in the complex and sensitive relationship between interface and body a coupling that makes the networked object both an essential psychological presence and a lingering concern for our sense of self
