Liu,2019-06-07 This book focuses on the Chinese health impact induced by ambient temperature variation especially the epidemiology based exposure response relationship with the mortality and morbidity from respiratory cardiovascular diseases and mental health among Chinese population A great number of epidemiological studies have reported that ambient temperature is closely associated with a wide range of health outcomes such as mortality cardiovascular and respiratory events adverse birth outcome and some infectious diseases such as dengue fever malaria Although a number of epidemiological studies in western countries have evaluated the adverse health effects of ambient temperature the exposure response relationship from these countries cannot simply be applied to the Chinese population due to the large differences in temperature profile exposure pattern as well as the population vulnerability This book will provide up to date estimates of the magnitude of adverse health effects of ambient temperature in the Chinese population We hope to provide readers with a comprehensive and organized body of information in the area of Ambient Temperature and health **Climate and**

J Wave Syndromes Charles Antzelevitch, Gan-Xin Yan, 2016-06-27 This book delineates the state of the art of the diagnosis and treatment of J wave syndromes as well as where future research needs to be directed It covers basic science translational and clinical aspects of these syndromes The authors are leading experts in their respective fields who have contributed prominently to the literature concerning these topics J wave syndromes are one of the hottest topics in cardiology today Cardiac arrhythmias associated with Brugada syndrome BrS or an early repolarization ER pattern in the inferior or infero lateral ECG leads are thought to be mechanistically linked to accentuation of transient outward current Ito mediated J waves Although BrS and ER syndrome ERS differ with respect to magnitude and

lead location of abnormal J waves they are thought to represent a continuous spectrum of phenotypic expression termed J wave syndromes ERS is divided into three subtypes with the most severe Type 3 displaying an ER pattern globally in the inferior lateral and right precordial leads BrS has been linked to mutations in 19 different genes whereas ERS has been associated with mutations in 7 different genes There is a great deal of confusion as to how to properly diagnose and treat the J wave syndromes as well as confusion about the underlying mechanisms The demonstration of successful epicardial ablation of BrS has provided new therapeutic options for the management of this syndrome for which treatment alternatives are currently very limited particularly in the case of electrical storms caused by otherwise uncontrollable recurrent VT VF An early repolarization pattern is observed in 2-5% of the US population While it is clear that the vast majority of individuals exhibiting an ER pattern are not at risk for sudden cardiac death the challenge moving forward is to identify those individuals who truly are at risk and to design safe and effective treatments

exchange among climate and impact scientists The sectors covered include agriculture terrestrial ecosystems human health transport conflict and more broadly covering the human environment nexus The book concludes with an outlook on the need for more transdisciplinary work and international collaboration between scientists and practitioners to address emergent risks and extreme events towards risk reduction and strengthened societal resilience Provides an overview about past present and future changes in climate and weather extremes and how to connect that knowledge to impact and risk assessment under global warming Presents different approaches to assess societal relevant impacts and risk of climate and weather extremes including compound events and the complexity of risk cascades and the interconnectedness of societal risk Features applications across a diversity of sectors including agriculture health ecosystem services and urban transport

K. Walker,Silvia Piconese,2021-03-08 **Insomnia and beyond - Exploring the therapeutic potential of orexin receptor antagonists** Michel Alexander Steiner,Christopher J Winrow,2014-11-11 Orexin hypocretin neuropeptides produced by a few thousand neurons in the lateral hypothalamus are of critical importance for the control of vigilance and arousal of vertebrates from fish to amphibians birds and mammals Two orexin peptides called orexin A and orexin B exist in mammals They bind with different affinities to two distinct widely distributed excitatory G protein coupled receptors orexin receptor type 1 and type 2 OXR 1 2 The discovery of an OXR mutation causing canine narcolepsy the narcolepsy like phenotype of orexin peptide knockout mice and the orexin neuron loss associated with human narcoleptic patients laid the foundation for the discovery of small molecule OXR antagonists as novel treatments for sleep disorders Proof of concept studies from Glaxo Smith Kline Actelion Pharmaceuticals Ltd and Merck have now consistently demonstrated the efficacy of dual OXR antagonists DORAs in promoting sleep in rodents dogs non human primates and humans Some of these antagonists have completed late stage clinical testing in primary insomnia Orexin drug discovery programs have also been

initiated by other large pharmaceutical companies including Hoffmann La Roche Novartis Eli Lilly and Johnson Johnson Orexins are increasingly recognized for orchestrating the activity of the organism's arousal system with appetite reward and stress processing pathways Therefore in addition to models of insomnia pharmacological effects of DORAs have begun to be investigated in rodent models of addiction depression and anxiety The first clinical trials in diabetic neuropathy migraine and depression have been initiated with Merck's MK 6096 www.clinicaltrials.gov Whereas the pharmacology of DORAs is established for their effects on wakefulness pharmacological effects of selective OXR 1 or OXR 2 antagonists SORAs have remained less clear From an evolutionary point of view the OXR 2 was expressed first in most vertebrate lineages whereas the OXR 1 is believed to result from a gene duplication event when mammals emerged Yet both receptors do not have redundant function Their brain expression pattern their intracellular signaling as well as their affinity for orexin A and orexin B differs During the past decade most preclinical research on selective OXR 1 antagonism was performed with SB 334867 Only in recent years other selective OXR 1 and OXR 2 antagonists with optimized selectivity profiles and pharmacokinetic properties have been discovered and phenotypes of OXR 1 and OXR 2 knockout mice were described The present Research Topic referred to in the Editorial as special topics issue comprises submissions of original research manuscripts as well as reviews directed towards the neuropharmacology of OXR antagonists The submissions are preclinical papers dealing with dual and/or selective OXR antagonists that shed light on the differential contribution of endogenous orexin signaling through both OXRs for cellular physiological and behavioral processes Some manuscripts also report on convergence or divergence of DORA vs SORA effects with phenotypes expressed by OXR 1 or OXR 2 knockout animals Ultimately these findings may help further define the potential of DORAs and SORAs in particular therapeutic areas in insomnia and beyond insomnia
