Written by specialists in the field, it combines expertise and years of experience in the use of DIgSILENT PowerFactory with a deep understanding of power systems analysis. These complementary approaches therefore provide a fresh perspective on how to model, simulate, and analyse power systems. This background is complemented with several guidelines for advanced use of DSL and DPL languages as well as for interfacing with other software packages which is of great value for creating and performing different types of steady state and dynamic performance simulation analysis. All employed test case studies are provided as supporting material to the reader to ease recreation of all examples presented in the book as well as to facilitate their use in other cases related to planning and operation studies.
