Afterman,Warren, Gorham & Lamont,1996-01-01 **Practical Auditing** Dr. S. V. Shinde, *Accounting for Climate Change* Daniel Lieberman,Matthias Jonas,Zbigniew Nahorski,Sten Nilsson,2010-05-27 Uncertainty analysis is a key component of national GHG inventory analyses The issues that are raised by the authors in this volume and the role that uncertainty analysis plays in many of their arguments and or proposals highlight the importance of such efforts Topics include bottom up versus top down emission inventory approaches compliance and verification issues signal detection and analysis techniques compliance with the Kyoto Protocol and the role of uncertainty in emissions trading schemes **System of Environmental-Economic Accounting 2012** United Nations,European Commission,Food and Agricultural Organization of the United Nations,International Monetary Fund,Organization for Economic Co-operation and Development,World Bank,2017-04-16 Comparable and reliable data supporting coherent analytical and policy frameworks are essential elements to inform debates and guide policy related to the interrelationships between the economy and the environment The System of Environmental Economic Accounting 2012 Central Framework SEEA Central Framework is a statistical framework consisting of a comprehensive set of tables and accounts which guides the compilation of consistent and comparable statistics and indicators for policymaking analysis and research It has been produced and is released under the auspices of the United Nations the European Commission the Food and Agriculture Organization of the United Nations the Organisation for Economic Co operation and Development the International Monetary Fund and the World Bank Group The SEEA Central Framework reflects the evolving needs of its users new developments in environmental economic accounting and advances in methodological research Interpretive Approaches to Global Climate Governance Chris Methmann,Delf Rothe,Benjamin

Stephan, 2013-06-03 Global climate change is perceived to be one of the biggest challenges for international politics in the 21st century. This work seeks to fuse a global governance perspective together with different interpretive approaches offering a novel way of looking at international climate politics. Equipped with a common interpretive tool kit, the authors examine different issue areas and excavate the contours of an overall pattern: the depoliticisation of climate governance. It is this concept which represents the overarching theme connecting the different contributions addressing issues such as how the securitization of climate change conceals its socio-economic roots, how highly political decisions and value judgements are couched in the terms of science, how the reframing of climate change as a matter of economic calculation and investment narrows the scope of political action, and how the prevailing concentration on technological solutions to climate change turns it into a mere administrative issue to be tackled by experts. Highlighting the depoliticisation of highly political issues provides a means to bring the political back into one of the most important issue areas of 21st century world politics. The editors have assembled a series of 14 interpretive inquiries into discourses of global climate governance which aim to flesh out an interpretive methodology demonstrating the value it offers to those seeking to achieve a better understanding of global climate governance. This work will be of great interest to students and scholars of environmental politics, political theory, and climate change.

Accounting for Carbon Valentin Bellassen, Nicolas Stephan, 2015-03-19 The ability to accurately monitor, record, report, and verify greenhouse gas emissions is the cornerstone of any effective policy to mitigate climate change. Accounting for Carbon provides the first authoritative overview of the monitoring, reporting, and verification (MRV) of emissions from the industrial site, project, and company level to the regional and national level. It describes the MRV procedures in place in more than fifteen of the most important policy frameworks such as emissions trading systems in Europe, Australia, California, and China, and the United Nations Framework Convention on Climate Change, and compares them along key criteria such as scope, cost, uncertainty, and flexibility. This book draws on the work of engineers and economists to provide a practical guide to help government and non-governmental policymakers and key stakeholders in industry to better understand different MRV requirements, the key trade-offs faced by regulators, and the choices made by up and running carbon pricing initiatives.

Greenhouse gas accounting in the forestry sector Food and Agriculture Organization of the United Nations, 2025-03-03 This report aims to illustrate the methodological improvements for estimating greenhouse gas (GHG) emissions and removals from forest management practices and disturbances implemented in the FAO's Environmental Externalities Accounting Tool (EX-ACT), an online accounting app that estimates and tracks the outcomes of agricultural interventions on environmental externalities, including GHG emissions. It highlights key updates from the previous tool's version, EX-ACT v 9, and shows the main limitations that have been overcome through a change in methodology. The revision follows the International Panel on Climate Change's Guidelines for National Greenhouse Gas Inventories (2006/2019). The methodology update now better reflects the effects of various forest management interventions.

on yearly GHG emissions and reductions as beforehand the tool only considered overall forest biomass changes over the entire accounting period The updated EX ACT online app now provides a more detailed approach accounting for both positive and negative changes in forest carbon stocks as well as multiple drivers of changes in forest carbon stocks including forest management thinning logging reduced impact logging etc and use timber fuelwood as well as disturbances fire forest pests and diseases storms drought etc A major shift in methodology is the transition from the Stock Difference approach to the Gain Loss approach to capture annual changes of forest carbon stocks The refined methodology improves estimates of GHG emissions and reductions offering a valuable tool for assessing the climate change mitigation effects of forestry activities in agrifood investment activities projects programmes and policies
