Manual Trash Rack:

Manual, 1993 **Design of Hydraulic Gates, 2nd Edition** Paulo C.F. Erbst, 2014-05-29 Revised and updated this second edition of Design of Hydraulic Gates maintains the same goal as the original to be used as a textbook and a manual of design of gates presenting the main aspects of design manufacture installation and operation of hydraulic gates while introducing new products technologies and calculation procedures This edition included new chapters on intake gates and trashrack design highlighting the aspects of safety operational and maintenance procedures To improve the strength against structural failure of intake trashracks the author proposes a series of rigid calculation assumptions design parameters and manufacturing procedures which will certainly result in safer trashracks Some 340 drawings and photographs 82 tables 107 references and 23 worked examples help the reader to understand the basic concepts and calculation methods presented

Assessment of engineering solutions for solid waste removal from irrigation canals in North Lebanon Salman, M., Pek, E., Simongini, C., Bizri, Y., El-Korek, N., Lucca, E., 2021-02-26 Waste management in Lebanon is a significant issue anticipating cascading and spill over effect on livelihood environment and agriculture North Lebanon has been experiencing population growth spurts due to humanitarian crises in neighbouring countries that contributes to the urgency of finding sustainable solutions Adequate delivery of response measures is beyond the capacities of local authorities Consequently waste crisis has reached its historical peaks It is unlikely that upcoming years can bring radical shifts related to the trends in rapidly increasing waste generation However the seemingly uncontrollable mechanisms should not lead to inaction but concentrated efforts should be stepped up to eliminate harmful consequences The project Rehabilitation and waste management of El Bared Canal Irrigation System to reduce source to sea pollution and improve livelihoods in the Akkar Region of Lebanon financed by the Government of Norway has been formulated to ensure minimal discharges of waste from El Bared System to the Mediterranean Sea thus improving the livelihoods of the people depending on the system through irrigation canal system rehabilitation solid waste disposal and improved agricultural output and job creation Applying a pilot approach the project mainly focuses on Akkar irrigation scheme to introduce both hard investment and soft measures in response to the waste crisis Following a multi criteria assessment approach the current report maps waste removal technologies and provides recommendations on their functions and suitability in the context of the target area Based on broader understanding of the feasibility it helps come to a decision on technology selection **Physicochemical Treatment Processes** Lawrence K.

Wang, Yung-Tse Hung, Nazih K. Shammass, 2007-11-13 The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution air noise solid waste and water Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste exists we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise

when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However realization of the ever increasing complexity and interrelated nature of current environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken

Urban Stormwater Victorian Stormwater Committee, 1999-10-28 The intense concentration of human activity in urban areas leads to changes in both the quantity and quality of runoff that eventually reaches our streams lakes wetlands estuaries and coasts The increasing use of impervious surfaces designed to provide smooth and direct pathways for stormwater runoff has led to greater runoff volumes and flow velocities in urban waterways Unmanaged these changes in the quantity and quality of stormwater can result in considerable damage to the environment Improved environmental performance is needed to ensure that the environmental values and beneficial uses of receiving waters are sustained or enhanced Urban Stormwater Best Practice Environmental Management Guidelines resulted from a collaboration between State government agencies local government and leading research institutions The guidelines have been designed to meet the needs of people involved in the planning design or management of urban land uses or stormwater drainage systems They provide guidance in ten key areas Environmental performance objectives Stormwater management planning Land use planning Water sensitive urban design Construction site management Business surveys Education and awareness Enforcement Structural treatment measures Flow management Engineers and planners within local government along with consultants to the development industry should find the guidelines especially useful Government agencies should also find them helpful in assessing the performance of stormwater managers While developed specifically for application in Victoria Australia the information will be of value to stormwater managers everywhere
