Downing, R. Valtin, 2012-12-06 During the 1970s there was a rapid increase in interest in metacognition and metalinguistics The impetus came from linguistics psychology and psycholinguistics But with rather unusual rapidity the work from these scientific disciplines was taken over in education This new direction in these various areas of academic study was taken simultaneously by several different investigators Although they had varying emphases their work sometimes appears to be overlapping despite this it has been rather difficult to find a consensus This is reflected in the varying terminology used by these independent investigators linguistic awareness metacognition metalinguistic ability task awareness lexical awareness and so on For educators these developments presented a glittering array of new ideas that promised to throw light on children's thinking processes in learning how to read Many reading researchers and graduate students have perceived this as a new frontier for the development of theory and research However the variety of independent theoretical approaches and their accompanying terminologies has been somewhat confusing *Young Children Continue to Reinvent Arithmetic--2nd Grade* Constance Kamii, Linda Leslie Joseph, 2004 Responding to their recent research on how children learn mathematics the authors have revised this bestselling textbook to provide practical advice on what works and what should be avoided when teaching second graders Features important revisions to their groundbreaking program including the harmful effects of teaching carrying and borrowing Summary of Joseph A.
