

Centered Difference Quotients

Another formula that is used to approximate the derivative of a function at a point is the **centered difference quotient (CDQ)**

$$f'(a) = \frac{f(a+h) - f(a-h)}{2h} \quad (2)$$

4. Again consider $f(x) = \sqrt{x}$.

- a. Graph f near the point $(4, 2)$ and let $h = 1/2$ in the centered difference quotient. Show the line whose slope is computed by the centered difference quotient and explain why the formula approximates $f'(4)$.
 b. Use the centered difference formula to approximate $f'(4)$ by completing Table 2.

h	Approximation	Error
0.1		
0.01		
0.001		
0.0001		

Table 2

- c. Explain why it is not necessary to use negative values of h in Table 2.
 d. Compare the accuracy of the derivative estimates in part (b) with those found in Steps 2 and 3.
 5. Use the CDQ (2) and a table similar to Table 2 to find a good approximation to $f'(0)$ for $f(x) = (1+x)^{-1}$.
 6. Use the CDQ (2) and a table similar to Table 2 to find a good approximation to $f'(\pi/6)$ for $f(x) = \sin x$.
 7. Table 3 gives the distance $f(t)$ fallen by a smokejumper t seconds after she opens her chute.
 a. Use the forward difference quotient (1) with $h = 0.5$ to estimate the velocity of the skydiver at $t = 2$ s.
 b. Repeat part (a) using the centered difference quotient (2).

t (seconds)	$f(t)$ (feet)
0	0
0.5	4
1.0	15
1.5	33
2.0	55
2.5	81
3.0	109
3.5	138
4.0	169

Computer Rounding Error

Using difference approximations to approximate derivatives with a computer or calculator is prone to *rounding errors*. These errors occur when a calculator rounds a number before using it in an arithmetic calculation. Such rounding may lead to remarkably inaccurate results.

8. Consider the function $f(x) = x^{10}$.

- a. Use analytical methods to find the exact value of $f'(1)$.
 b. Use the forward difference quotient to approximate $f'(1)$ using values of $h = 10^{-2}$, 10^{-5} , and 10^{-8} . What do you observe?
 c. Compute approximations to $f'(1)$ using $h = 10^{-n}$, for $n = 5, 6, 7, \dots, 15$. What do you observe?

In Step 8c, you should find that for small enough values of h , the approximations to $f'(1)$ eventually are 0, which is clearly a bad estimate. Here is why this error occurs. Suppose $h = 10^{-14}$. The calculator rounds

$f(1 + 10^{-14})$ to 1 and therefore the forward difference quotient becomes $\frac{f(1 + 10^{-14}) - f(1)}{10^{-14}}$, which is

estimated to equal $\frac{1-1}{10^{-14}}$ or 0.

d. The remedy to rounding errors in this situation is to use small—but not too small—values of h . Based on the approximations computed in parts (b) and (c), what is a good approximation to $f'(1)$?

Project: Execution Helgi Thor Ingason,Haukur Ingi Jonasson,2019-06-25 Strategic planning is the starting point for projects and often the primary reason for a project s success or failure Project leaders and project orientated organisations need to understand strategic planning to understand their position and environment and make rational decisions when selecting and defining their projects and programmes The authors provide the reader with a straightforward comprehensive understanding of the basics of project management including the present status of the discipline its history and theoretical foundations With emphasis on the project life cycle it is designed to support the IPMA D C or B level

qualifications and IPMA Competence Baseline 4.0 providing you with all the information needed to pursue certification. Project Execution is also an ideal introductory textbook to progressive programmes on strategic planning with a focus on collaborative work, open strategy and an exploration of open strategic planning on a social level. It provides a wealth of learning tools and case studies to demonstrate best practice. Navigating Project Selection and Execution for Competitive Advantage John Triantis, 2021-06-28. For many organizations the way in which processes and projects are selected and executed is a fundamental factor in how well they can prosper in today's marketplace. By improving efficiency, driving productivity and reducing costs, organizations can increase throughput, improve service and bring new products to market faster. The aim of this book is to show how to assess chances of project success at the idea stage in order to direct resources to promising projects and conserve resources. In doing that, it presents effective project execution processes, practices and experiences that help to select the right projects and do them right. This is a mindset-changing book from project speed and cost-cutting to discipline, execution excellence and competitive advantage. It is about effective business development using a practical approach to select the right projects and do them successfully. It describes how to evaluate and predict the likelihood of project success at the idea stage before resources are expended to develop projects. Each chapter describes how to evaluate planned project development and implementation, rate its performance and identify gaps to be filled to achieve project execution excellence. The book is designed to guide the assessment of each project stage to uncover areas in need of improvement with focus on prediction of project success. Hence, each chapter stands on its own and assesses key elements of project stages to determine how well they are executed. The journey of project execution described is based on predicting project success at the idea stage and begins with understanding differences in large project requirements and their effects on the way they should be done. The evaluation of the idea's origin and reasons for pursuing a project is done with help from an experienced facilitator/moderator. The reason for it is that this individual is engaged to assess likelihood of success from an external, independent, critical and objective perspective before the project begins. Curriculum handbook with general information concerning ... for the United States Air Force Academy United States Air Force Academy, 1987. **Chemical Pedagogy** Keith S. Taber, 2024-12-20. How should chemistry be taught in schools, colleges and universities? Chemical Pedagogy discusses teaching approaches and techniques, the reasoning behind them and the evidence for their effectiveness. The book surveys a wide range of different pedagogic strategies and tactics that have been recommended to better engage learners and provide more effective chemistry teaching. These accounts are supported by an initial introduction to some key ideas and debates about pedagogy, the science of teaching. Chemical Pedagogy discusses how teaching innovations can be tested to inform

research based practice Through this book the author explores the challenges of carrying out valid experimental studies in education and the impediments to generalising study results to diverse teaching and learning contexts As a result the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms Chemical Pedagogy introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding An examination of some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction which balances the challenge offered to learners with the level of support provided This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience
