

Systems Clues in Everyday Language

by Leslie Smith, University

How many times have you heard someone say, "This is spiraling out of control" or "This is a rollercoaster"? Or even newspaper articles describe the "boom and bust" cycle of a particular market segment or feature about how the bundling of small procedural rules in business and government can "snowball" into big snowballs. When people use these kinds of phrases, they often intuitively give hints about the underlying *behavior* of complex systems. By listening and looking for such "systems clues," we can gain insight into how systems operate on a fundamental level—and start to think about the most effective ways to implement change.

Winless and Virtuous Cycles: Reinforcing Processes

The expression "virtuous cycle," for example, suggests rapidly building momentum in a positive direction.

- An instructor might use this phrase to describe how great test results could lead to a perception loss of student stress, as students come to question a professor's quality.
- A teacher might use the term to describe a student whose test achievement and peer performance reinforce each other in a downward spiral.
- Many scientists have described the virtuous cycle that occurs when a slight rise in atmospheric temperature begins to melt ice in the polar regions; the now bare ground absorbs more heat, causing even more ice to melt.

In systems thinking terms, both virtuous and vicious cycles are reinforcing feedback processes, in which a change builds on itself over time.

Rollercoaster or Yo-Yo Behavior: Balancing Processes

The expression "rollercoaster" is often used to describe behavior that swings in one direction and then another over time.

- Dieticians talk about "yo-yo dieting," the tendency for people who have lost weight to gain it back again, prompting another round of dieting and weight gain.
- Business writers refer to the "rollercoaster economy" as a way to remind readers that, during good times, they need to prepare for the inevitable downturn.
- Hospital administrators describe the processes they experience around supply and demand of medical staff. For example, when demand for doctors goes up, more people go to medical school, leading to an oversupply of doctors. When physicians find it difficult to get jobs, fewer people go into the profession, and hospitals experience staffing shortages.

These are balancing feedback processes, in which a set of interactions change so when a system tends to a state of equilibrium.

What other words and sayings offer clues to complex systems behavior?
