Remote Sensing of Plant Biodiversity Jeannine Cavender-Bares, John A. Gamon, Philip A. Townsend, 2020-06-22 This Open Access volume aims to methodologically improve our understanding of biodiversity by linking disciplines that incorporate remote sensing and uniting data and perspectives in the fields of biology landscape ecology and geography The book provides a framework for how biodiversity can be detected and evaluated focusing particularly on plants using proximal and remotely sensed hyperspectral data and other tools such as LiDAR The volume whose chapters bring together a large cross section of the biodiversity community engaged in these methods attempts to establish a common language across disciplines for understanding and implementing remote sensing of biodiversity across scales The first part of the book offers a potential basis for remote detection of biodiversity An overview of the nature of biodiversity is described along with ways for determining traits of plant biodiversity through spectral analyses across spatial scales and linking spectral data to the tree of life The second part details what can be detected spectrally and remotely Specific instrumentation and technologies are described as well as the technical challenges of detection and data synthesis collection and processing The third part discusses spatial resolution and integration across scales and ends with a vision for developing a global biodiversity monitoring system Topics include spectral and functional variation across habitats and biomes biodiversity variables for global scale assessment and the prospects and pitfalls in remote sensing of biodiversity at the global scale *Holt Science & Technology* Holt Rinehart & Winston, 2004

Biodiversity, Ecosystem Functioning, and Human Wellbeing Shahid Naeem, Daniel E. Bunker, Andy Hector, Michel Loreau, Charles Perrings, 2009-07-30 How will biodiversity loss affect ecosystem functioning ecosystem services and human well being In an age of accelerating biodiversity loss this timely and critical volume summarizes recent advances in biodiversity ecosystem functioning research and explores the economics of biodiversity and ecosystem services The book starts by summarizing the development of the basic science and provides a meta analysis that quantitatively tests several biodiversity and ecosystem functioning hypotheses It then describes the natural science foundations of biodiversity and ecosystem functioning research including quantifying functional diversity the development of the field into a predictive science the effects of stability and complexity methods to quantify mechanisms by which diversity affects functioning the importance of trophic structure microbial ecology and spatial dynamics Finally the book takes research on biodiversity and ecosystem functioning further than it has ever gone into the human dimension describing the most pressing environmental challenges that face humanity and the effects of diversity on climate change mitigation restoration of degraded habitats managed ecosystems pollination disease and biological invasions However what makes this volume truly unique are the chapters that consider the economic perspective These include a synthesis of the economics of ecosystem services and biodiversity and the options open to policy makers to address the failure of markets to account for the loss of ecosystem services an examination of the challenges of valuing ecosystem services and hence to

understanding the human consequences of decisions that neglect these services and an examination of the ways in which economists are currently incorporating biodiversity and ecosystem functioning research into decision models for the conservation and management of biodiversity A final section describes new advances in ecoinformatics that will help transform this field into a globally predictive science and summarizes the advancements and future directions of the field The ultimate conclusion is that biodiversity is an essential element of any strategy for sustainable development *Children's Books in Print* R R Bowker Publishing, Bowker, 1999-12 **Biogeography** C. Sklar, Arnold van der Valk, 2012-12-06 PREFACE Within the Florida Everglades tree islands which cover only a small percent of this ecosystem historically have provided essential habitat for a wide variety of terrestrial and amphibious plants birds and animals These tree islands however have been one of its least studied features Because of their less flood tolerant vegetation tree islands are one of the most sensitive components of the Everglades to changes in hydrology and many tree islands have been lost during periods when water levels have been abnormally high or low Their sensitivity to water level changes makes tree islands potentially one of the best and surest measures of the overall hydrologic health of the Everglades Consequently the maintenance of healthy functioning tree islands and the restoration of those that have been lost will be an important performance measure that will be used to judge the success of the Comprehensive Everglades Restoration Plan CERP A symposium Tree Islands of the Everglades was held on July 14 and 15 1998 at Florida Atlantic University Boca Raton Florida It was sponsored by Florida Center for Environmental Studies and the South Florida Water Management District This was the first scientific meeting ever devoted to tree islands The organizers of this symposium were Drs Arnold van der Valk Florida Center for Environmental Studies and Iowa State University Fred Sklar South Florida Water Management District and Wiley Kitchens United States Geological Survey
