How Can I Fill In A Form:

Forms that Work Caroline Jarrett, Gerry Gaffney, 2009-03-02 Forms that Work Designing Web Forms for Usability clearly explains exactly how to design great forms for the web. The book provides proven and practical advice that will help you avoid pitfalls and produce forms that are aesthetically pleasing, efficient and cost effective. It features invaluable design methods, tips and tricks to help ensure accurate data and satisfied customers. It includes dozens of examples from nitty gritty details, label alignment, mandatory fields to visual designs, creating good grids, use of color. This book isn't just about colons and choosing the right widgets. It's about the whole process of making good forms which has a lot more to do with making sure you're asking the right questions in a way that your users can answer than it does with whether you use a drop down list or radio buttons. In an easy to read format with lots of examples, the authors present their three layer model: relationship, conversation, appearance. You need all three for a successful form: a form that looks good, flows well, asks the right questions in the right way and most important of all, gets people to fill it out. Liberally illustrated with full color examples, this book guides readers on how to define requirements, how to write questions that users will understand and want to answer and how to deal with instructions, progress indicators and errors. This book is essential reading for HCI professionals, web designers, software developers, user interface designers, HCI academics and students, market research professionals and financial professionals. Provides proven and practical advice that will help you avoid pitfalls and produce forms that are aesthetically pleasing, efficient and cost effective. Features invaluable design methods, tips and tricks to help ensure accurate data and satisfied customers. Includes dozens of examples from nitty gritty details, label alignment, mandatory fields to visual designs, creating good grids, use of color. Foreword by Steve Krug, author of the best selling *Don't Make Me Think*. **Filling-In** Luiz Pessoa, Peter De Weerd, 2003-02-27 The best example of filling in involves the blind spot: a region of the retina devoid of photoreceptors. Remarkably, the region of visual space corresponding to the blind spot is not perceived as a dark region in space but instead as having the same color and texture as the surrounding background, hence the expression filling in. While this type of perceptual completion phenomenon is common in the visual domain, it is argued by the leading scientists who contribute to this book that forms of filling in also take place in other sensory modalities including the auditory, somatosensory and motor systems. In a concluding chapter, an integrative approach is taken which attempts to provide a common framework for completion phenomena occurring on a fast time scale and cortical reorganization in sensory and motor cortex induced by peripheral damage or skill learning taking place on a slower time scale. It is proposed that systematic changes in the interplay between inhibitory and excitatory inputs permit cortical neurons to become driven by new sources of input which, in addition to initial perceptual consequences, can lead to a long term structural reorganization of cortex. This book represents a truly interdisciplinary approach to neuroscience with chapters covering computational modeling, visual psychophysics, functional brain imaging, single cell physiology and clinical patient cases. It will be of interest
