

Chapter 11 Study Guide

Muscular System

1. Describe the function of a prime mover, antagonist, synergist, and fixator.
 - Prime mover: principal muscle that performs action
 - Synergist: assists the agonist muscle or "primary mover" for a specific action at a joint.
 - Fixator: serves as a stabilizer of one part of the body during movement of another part.
2. List the criteria used in naming muscles and provide an example to illustrate each.
 - Shape, size, location in the body, location of the attachment points, number of origin, action, direction.

Example: shape: deltoid, size: gluteus maximus, location in body: biceps femoris, location of the attachment: sternocleidomastoid, number of origin: triceps, action: supinator, direction: transversus abdominis
3. Name the common patterns of muscle fascicle arrangement and provide an example to illustrate each.
 - Common patterns of muscle fascicle: parallel, circular, convergent, pennate,
 - Parallel: sartorius circular: orbicularis oris, convergent: pectoralis major, pennate: rectus femoris
4. Name and describe the components of a lever system.
 - Lever, fulcrum, effort, load
 - Mechanical advantage: Mechanical advantages allows humans to perform tasks much easier in terms of the force they need to apply, but must always obey the conservation of energy.
 - Mechanical disadvantage: When a lever's load arm is longer than its effort arm, it is said to be at a mechanical disadvantage. It has a low load force to effort ratio.
5. Differentiate between a lever designed for speed versus power.
 - The speed lever (third-class) is the most common type of lever system in the body. Applied force is located between the load and the fulcrum
 - The power lever (second class) Load lies between the applied force and the fulcrum
6. Differentiate between a first class, second class, and third class lever and give an example of each.
 - First class lever: function: provide a way for the body to change the direction, speed, and strength of movement at a joint. example: the head and neck during neck extension.
 - Second class lever: function: the load is in the middle between the fulcrum and the effort. example: standing on tip toes
 - Third class lever: differs from the second-class lever in that the distribution of forces is changed in relation to the fulcrum. Example: elbow joint
7. What 4 muscles make up the quadriceps?
 - Rectus femoris, Vastus lateralis, Vastus medialis, Vastus intermedius
8. What 3 muscles make up the hamstring?
 - semitendinosus, semimembranosus, and biceps femoris

Skeletal Muscles of the Human Body 4th Edition is an atlas of the muscles of the human body. This approachable yet detailed musculoskeletal anatomy manual provides both beginner and advanced students with a thorough understanding of skeletal muscles in a compartmentalized customizable layout. Each muscle spread shows the individual muscle drawn over a photo of the human body with an arrow to indicate the line of pull of the muscle and explains the muscle name, the origin of that name, Greek and Latin derivations, pronunciation, attachments, actions, eccentric contraction function, isometric contraction function, innervation to two levels of detail with predominant levels in bold, and arterial supply to two levels of detail. This new edition also features robust Evolve resources, an updated art program, and new chapter review and critical thinking questions that encourage you to apply what you have learned to prepare for practice.

UNIQUE Overlay art consisting of over 380 full color anatomical illustrations of muscles, bones, and ligaments drawn over photographs helps identify the positions of muscles and bones in the human body.

UNIQUE Electronic Muscle and Bone Review Program features a base photograph with a skeleton drawn in and a list of every muscle for each major region of the body so students can choose any combination of muscles and place them onto the illustration, allowing them to see not only the muscle attachments but also the relationship among the muscles of the region.

Complete muscle coverage in an easy to understand layout makes this text appropriate for novices to anatomy as well as intermediate and advanced students. Content organized by body region and includes information on how muscles in that region function together and large drawings of the muscles of that region so you can go directly to the topic you are studying.

Covers the methodology for each muscle with information for learning muscle actions to explain the reasoning behind each action and encourage you to learn and not just memorize.

A four color student friendly design with sections clearly boxed throughout and checkboxes that help you keep track of what you need to learn and what you have mastered.

Customizable format with checkboxes and numbered lists in each muscle layout presents basic muscle information for the beginning student in bold type and more advanced information in regular type.

Palpation boxes include bulleted steps instructing how to palpate each muscle so you can apply this assessment skill in practice.

Evolve website for instructors includes TEACH Resources, a Test Bank, and an image collection so instructors can easily access all of the materials they need to teach their course in one place and track through the course management system provided via Evolve.

Evolve website for students includes access to audio of the author reading aloud muscle names, attachments, and actions for the muscles covered in the book, labeling exercises, and more to enrich your learning experience.
