

ENPC 4th Edition: Practice Test

1. A preschooler has a small laceration that requires 2 stitches. The nurse covers the wound with a bandage knowing that it will comfort the child to have it covered. What is the developmental reason for this intervention?

- A.) Preschoolers are magical thinkers and imagine bandages keep their insides from coming out.
- B.) Preschoolers fear physical disability and believe a bandage will prevent disability.
- C.) Preschoolers explore orally and will likely chew or suck on the stitches if left uncovered.
- D.) Preschoolers are concerned with body image and don't want to appear different than peers. - Answer- A.) Preschoolers are magical thinkers and imagine bandages keep their insides from coming out.

Rationale: Preschoolers are magical and illogical thinkers and have difficulty distinguishing fantasy from reality. They have misconceptions about illness, injury, and bodily functions. For example, they perceive that if their skin is cut, they fear their insides will leak out. Covering a wound with a bandage helps them with this fear.

2. 7-month-old presents to the emergency department with a complaint of fever. Assessment reveals a patent airway and slight cyanosis around his lips and nail beds. He is alert and interactive. His vital signs are 38.5 C (101.3F), HR 134, RR 32, BP 78/54 mm Hg, and Spo2 84%. The nurse notes a healed surgical scar on his chest. Based on this assessment, what is the nurse's priority?

- A.) Administer ibuprofen to treat the fever.
- B.) Begin oxygen via a nonrebreather mask.
- C.) Obtain a surgical history.
- D.) Ask if the Spo2 is normal for him. - Answer- D.) Ask if the Spo2 is normal for him.

Rationale: Children with special healthcare needs may present differently than other children, but these differences may be normal. The surgical scar on the chest is likely from a congenital heart defect repair. The mother's chief complaint is the fever, not the color, pulse oximetry, or the respiratory distress. This may be because these aspects of his assessment are normal. The intact mental status is also a sign that he has adapted to lower oxygen saturation's. The child's baseline must come from the caregiver before any intervention.

3. An 11-year-old presents to the emergency department with a complaint of hitting his head while playing soccer. The nurse enters the room and performs an across-the-room assessment. He is staring at the wall. He has no increased work of breathing, and his color is pink. Using the pediatric assessment triangle (PAT), what classification will the nurse assign?

Cone Penetration Testing 2022 Guido Gottardi, Laura Tonni, 2022-06-24 This volume contains the proceedings of the 5th International Symposium on Cone Penetration Testing CPT 22 held in Bologna Italy 8-10 June 2022. More than 500 authors, academics, researchers, practitioners and manufacturers contributed to the peer-reviewed papers included in this book, which includes three keynote lectures, four invited lectures and 169 technical papers. The contributions provide a full picture of the current knowledge and major trends in CPT research and development with respect to innovations in instrumentation, latest advances in data interpretation and emerging fields of CPT application. The paper topics encompass three well-established topic categories typically addressed in CPT events: Equipment and Procedures, Data Interpretation, Applications. Emphasis is placed on the use of statistical approaches and innovative numerical strategies for CPT data interpretation, liquefaction studies, application of CPT to offshore engineering, comparative studies between CPT and other in situ tests. Cone Penetration Testing 2022 contains a wealth of information that could be useful for researchers, practitioners and all those working in the broad and dynamic field of cone penetration testing. *Cone Penetration Testing 2018* Michael A. Hicks, Federico Pisanò, Joek Peuchen, 2018-06-13 Cone Penetration Testing 2018 contains the proceedings of the 4th International Symposium on Cone Penetration Testing CPT 18 Delft, The Netherlands 21-22 June 2018 and presents the latest developments relating to the use of cone penetration testing in geotechnical engineering. It focuses on the solution of geotechnical challenges using the cone penetration test (CPT). CPT add-on measurements and companion in situ penetration tools such as full flow and free fall penetrometers with an emphasis on practical experience and application of research findings. The peer-reviewed papers have been authored by academics, researchers and practitioners from many countries worldwide and cover numerous important aspects ranging from the development of innovative theoretical and numerical methods of interpretation to real field applications. This is an Open Access ebook and can be found on www.taylorfrancis.com

Design of Axially Loaded Piles - European Practice F. De Cock, C. Legrand, 2020-12-17 This book is unique on the subject because it is not so much a collection of individual work but basically comprising national reports from most European countries on the present day design methods as prescribed in more or less strict national codes or recommendations and so daily used in practice by consulting engineers and contractors. As far as already implemented the application of these methods within the framework of Eurocode 7 is described as well. In order to improve the understanding of the design methods, the national papers also consider aspects such as the local piling practice, limitations of the design methods, some practical examples and particular national experiences. The proceedings also include the contributions of two invited speakers as well as those of the three session discussion leaders focusing on some particular aspects with regards to pile design. The book is of particular interest for those who are involved with pile design in practice: consulting engineers, piling contractors, control organisations as well as those dealing with geotechnical normalisation and research work. **ACI**
