*Architecture and Engineering* Oleg Kapliński, Wojciech Bonenberg, 2020-12-18 The book is

addressed to architects and civil engineers Design and research are areas connecting their activities The contents of the book confirm the fact that the interface between architecture and engineering is multidimensional The ways of finding points of contact between the two industries are highlighted This is favored by the dynamically changing reality supported by new design paradigms and new research techniques The multithreaded subject matter of the articles is reduced to six sections Research Scopes Methods Design Aspects Context Nature of Research and Economy and Cost Calculation Each of the articles in these six blocks has its weight And so in the Nature of Research section the following areas have been underscored laboratory tests in situ research field investigations and street perception experiments The section Design Aspects includes design oriented thinking geometrical forms location of buildings cost prediction attractor and distractor elements and shaping spatial structures The new design and research tools are an inspiration and a keystone bonding architects and engineers

*Sustainable Interdisciplinarity* Giuseppe T. Cirella, Alessio Russo, 2020-01-23 Sustainable interdisciplinarity focuses on human nature relations and a multitude of contemporary overlapping research between society and the environment A variety of disciplines have played a large part in better understanding sustainable development since its high profile emergence approximately a quarter of a century ago At present the forefront of sustainability research is an array of methods techniques and growing knowledge base that considers past present and future pathways Specific multidisciplinary concentrations within the scope of societal changes urban landscape transformations international environmental comparative studies as well as key theories and dynamics relating to sustainable performance are explored Specializations in complex sustainability issues address international governance arrangements rules and organizations both public and private within the scope of four themes sustainability human geography environment and interdisciplinary societal studies This book contains eleven thoroughly refereed contributions concerning pressing issues that interlink sustainable interdisciplinarity with the presented themes in terms of the human nature interface

**Building Performance Analysis** Pieter de Wilde, 2018-07-23 Explores and brings together the existent body of knowledge on building performance analysis Shortlisted in the CIBSE 2020 Building Performance Awards Building performance is an important yet surprisingly complex concept This book presents a comprehensive and systematic overview of the subject It provides a working definition of building performance and an in depth discussion of the role building performance plays throughout the building life cycle The book also explores the perspectives of various stakeholders the functions of buildings performance requirements performance quantification both predicted and measured criteria for success and the challenges of using performance analysis in practice Building Performance Analysis starts by introducing the subject of building performance its key terms definitions history and challenges It then develops a theoretical foundation for the subject explores the complexity of performance assessment and the way that performance analysis impacts on actual buildings In doing so it attempts to answer the following questions What is building performance How can building performance be measured and analyzed How does

the analysis of building performance guide the improvement of buildings And what can the building domain learn from the way performance is handled in other disciplines Assembles the current body of knowledge on building performance analysis in one unique resource Offers deep insights into the complexity of using building performance analysis throughout the entire building life cycle including design operation and management Contributes an emergent theory of building performance and its analysis Building Performance Analysis will appeal to the building science community both from industry and academia It specifically targets advanced students in architectural engineering building services design building performance simulation and similar fields who hold an interest in ensuring that buildings meet the needs of their stakeholders **Cross Laminated**
