

Enzyme Cut-outs Activity

Objective: Enzymes are proteins that help chemical reactions occur at a faster rate by lowering the energy needed for the reactions. First, the enzymes react with a substrate to form an enzyme-substrate complex (like a lock and key). Once this complex is formed, the substrate becomes a product or products and leaves the enzyme. The enzyme can then repeat the reaction with more substrate. The enzyme is shaped so it will react with only one specific substrate. On this next page are shapes of enzymes, substrates, and products. Your job will be to cut them out, manipulate them, glue them, and explain the reaction that occurs. Complete Parts A, B, C, D.

Materials

directions and class notes
cut-out sheet

construction paper
scissors

glue
pencil or pen

Part A

Vocabulary—define the following terms (hint: you can use your notes)

enzyme —
catalyze —
chemical reaction —
activation energy —
substrate —
active site —
denatured —

Part B

1. Using one sheet of the cut-out paper, cut out all the enzymes, substrates, and products.
2. Organize the cut outs on the construction paper so the pieces demonstrate this equation:
 $\text{enzyme} + \text{substrate} \rightarrow \text{enzyme-substrate complex} \rightarrow \text{enzyme} + \text{product 1} + \text{product 2}$
3. Glue the cut outs in the appropriate places on the construction paper.
4. Label the catalyst that you glued as the following compound:

Enzyme = lactase
Substrate = lactose
Products = glucose and galactose

5. With the above terms and equation, **explain** what happened (write your explanation on the same side of construction paper). Use as many vocabulary words from Part A as you can.

Part C

1. Using the other sheet of the cut-out paper, cut out all enzymes, substrates, and products.
2. Follow the directions as above, this time demonstrating this equation:
 $\text{enzyme} + \text{substrate 1} + \text{substrate 2} \rightarrow \text{enzyme-substrate complex} \rightarrow \text{enzyme} + \text{product}$
3. As with the previous sheet, glue and label the cutouts as the following compounds:

Enzyme = Sucrase
Substrates = glucose and fructose
Product = sucrose

4. With the above terms and equation, **explain** what happened (write your explanation on the same side of construction paper). Use as many vocabulary words from Part A as you can.

Structure and Function of the Aspartic Proteinases Ben M. Dunn,2012-12-06 In September 1990 a group of 160 scientists from 19 countries and 21 of the United States met at the Red Lion Inn in Rohnert Park Sonoma County California The purpose of this meeting was to share new information from recent research on the Aspartic Proteinases This book is a compilation of the information transferred in that forum The Aspartic Proteinases include all those enzymes from the fourth class of proteolytic enzymes the first three being the Serine Cysteine and Metalloproteinases Of course all the scientists in attendance at the Sonoma Aspartic Proteinase Conference would agree that our current level of understanding of the structure and function of the Aspartic Proteinase class of enzymes is clearly first class The reasons for this require a bit of historical perspective The group of scientists who are engaged in study of this family of enzymes first met as a separate entity in 1976 in Norman Oklahoma at a meeting organized by Jordan Tang of the Oklahoma Medical Research Foundation This was an exciting time as the first crystal structures of some of these enzymes were described by Blundell James and Davies During that conference the relationship between the two halves of the mammalian and fungal enzymes was recognized and this has provided a structural foundation for analysis of the retroviral enzymes which came later A book was published by Plenum Press documenting l this conference and the current book is an update to that important work
