Urban Hydrology, Watershed Management and Socio-Economic Aspects Arup K. Sarma, Vijay P. Singh, Suresh A. Kartha, Rajib K. Bhattacharjya, 2016-10-25 The book brings together high quality research articles on advanced hydrological analysis advanced computational methods and the ecological and sociological aspects of urban watershed management under one umbrella The rapid pace of urbanization not accompanied by any farsighted holistic plan has reduced many cities in the developing world into multi hazard areas The most perceptible consequence of urbanization is the change in land use and land cover which in turn impacts hydrological systems Accordingly scientific studies on urban hydrology with due emphasis on ecological and sociological aspects under changing climate are vital to the appropriate design of urban landscapes and civil infrastructure works This book addresses precisely these issues offering a useful guide for environmentalists hydrologists and a broad range of socio economic scientists exploring the environmental vulnerabilities arising from urbanization

Water Systems towards New Future Challenges Helena M. Ramos, 2021-03-09 This book comprises components associated with smart water which aims at the exploitation and building of more sustainable and technological water networks towards the water energy nexus and system efficiency The implementation of modeling frameworks for measuring the performance based on a set of relevant indicators and data applications and model interfaces provides better support for decisions towards greater sustainability and more flexible and safer solutions The hydraulic management and structural models represent the most effective and viable way to predict the behavior of the water networks under a wide range of conditions of demand and system failures The knowledge of reliable parameters is crucial to develop approach models and therefore positive decisions in real time to be implemented in smart water systems On the other hand the models of operation in real time optimization allow us to extend decisions to smart water systems in order to improve the efficiency of the water network and ensure more reliable and flexible operations maximizing cost environmental and social savings associated with losses or failures The data obtained in real time instantly update the network model towards digital
