National Grassland in South Dakota ,2004 The Urban Tree Duncan Goodwin, 2017-04-07 There is a growing evidence base that documents the social environmental and economic benefits that urban trees can deliver Trees are however under threat today as never before due to competition for space imposed by development other hard infrastructures increased pressure on the availability of financial provision from local authorities and a highly cautious approach to risk management in a modern litigious society It is therefore incumbent upon all of us in construction and urban design disciplines to pursue a set of goals that not only preserve existing trees where we can but also ensure that new plantings are

appropriately specified and detailed to enable their successful establishment and growth to productive maturity Aimed at developers urban planners urban designers landscape architects and arboriculturists this book takes a candid look at the benefits that trees provide alongside the threats that are eliminating them from our towns and cities It takes a simple applied approach that explores a combination of science and practical experience to help ensure a pragmatic and reasoned approach to decision making in terms of tree selection specification placement and establishment In this way trees can successfully be incorporated within our urban landscapes so that we can continue to reap the benefits they provide **General Studies**
