**Developing Charging Infrastructure and Technologies for Electric Vehicles** Alam, Mohammad Saad, Pillai, Reji Kumar, Murugesan, N., 2021-12-31 The increase in air pollution and vehicular emissions has led to the development of the renewable energy based generation and electrification of transportation Further the electrification shift faces an enormous challenge due to limited driving range long charging time and high initial cost of deployment Firstly there has been a discussion on renewable energy such as how wind power and solar power can be generated by wind turbines and photovoltaics respectively while these are intermittent in nature The combination of these renewable energy resources with available power generation system will make electric vehicle EV charging sustainable and viable after the payback period Recently there has also been a significant discussion focused on various EV charging types and the level of power for charging to minimize the charging time By focusing on both sustainable and renewable energy as well as charging infrastructures and technologies the future for EV can be explored Developing Charging Infrastructure and Technologies for Electric Vehicles reviews and discusses the state of the art in electric vehicle charging technologies their applications economic environmental and social impact and integration with renewable energy This book captures the state of the art in electric vehicle charging infrastructure deployment their applications architectures and relevant technologies In addition this book identifies potential research directions and technologies that facilitate insights on EV charging in various charging places such as smart home charging parking EV charging and charging stations This book will be essential for power system architects mechanics electrical engineers practitioners developers practitioners researchers academicians and students interested in the problems and solutions to the state of the art status of electric vehicles **Four Wheel Drive Handbook** James T. **Renewable Energy Integration with Building Energy Systems** V.S.K.V. Harish, Amit Vilas Sant, Arun Kumar, 2022-07-19 Construction as an industry sector is responsible for around one third of the total world wide energy usage and about 20% of greenhouse gas emissions The rise in number of buildings and floor space area for both residential and commercial purposes has imposed

enormous pressure on existing sources of energy Implementations like efficient usage of building energy systems design measures utilization of local energy resources energy storage and renewable energy sources for meeting electricity demand are currently under development and deployment to improve the energy performance index However integrating all such measures and evaluation of developed nearly zero energy and zero emission buildings is yet to be explored In this book different control techniques together with intelligent building technology used to improve the energy performance of buildings have been illustrated Every building energy control system has a two fold objective for energy and comfort requirements to achieve a high comfort index for thermal visual air quality humidity and various plug loads and to increase the energy performance index The most significant aspect of the design of buildings energy control system is modelling All the components methodologies and processes involved in developing a renewable energy driven building are covered in detail This book is intended for graduates and professionals working towards the development of sustainable built environment using renewable energy sources *Electrical World* ,1899-07 *Electric Vehicle Integration in a Smart Microgrid Environment* Mohammad Saad Alam,Mahesh Krishnamurthy,2021-08-19 Electric Vehicle Integration in a Smart Microgrid Environment The growing demand for energy in today s world especially in the Middle East and Southeast Asia has been met with massive exploitation of fossil fuels resulting in an increase in environmental pollutants In order to mitigate the issues arising from conventional internal combustion engine powered vehicles there has been a considerable acceleration in the adoption of electric vehicles EVs Research has shown that the impact of fossil fuel use in transportation and surging demand in power owing to the growing EV charging infrastructure can potentially be minimized by smart microgrids As EVs find wider acceptance with major advancements in high efficiency drivetrain and vehicle design it has become clear that there is a need for a system level understanding of energy storage and management in a microgrid environment Practical issues such as fleet management coordinated operation repurposing of batteries and environmental impact of recycling and disposal need to be carefully studied in the context of an ageing grid infrastructure This book explores such a perspective with contributions from leading experts on planning analysis optimization and management of electrified transportation and the transportation infrastructure The primary purpose of this book is to capture state of the art development in smart microgrid management with EV integration and their applications It also aims to identify potential research directions and technologies that will facilitate insight generation in various domains from smart homes to smart cities and within industry business and consumer applications We expect the book to serve as a reference for a larger audience including power system architects practitioners developers new researchers and graduate level students especially for emerging clean energy and transportation electrification sectors in the Middle East and Southeast Asia **Motor Truck Journal** ,1909
