For each specific condition, patient population, or setting, chapters provide guidance on topics such as medication selection, combination, and maintenance; dosing regimens; side effect monitoring and management; and optimization of treatment response. Closing this volume is an Appendix of Psychiatric Medications with key information on each of the agents covered in the Textbook presented in a convenient tabular format. Noteworthy additions to this textbook include chapters addressing the following topics: The potential roles of personalized medicine in psychiatry and of artificial intelligence and machine learning in psychopharmacology; New medications with novel pharmacological mechanisms, including the neurosteroid antidepressant brexanolone and the atypical antipsychotic pimavanserin; Use of investigational agents such as psychedelics in psychiatric treatment; Treatment of alcohol use disorder, PTSD, OCD, and autism spectrum disorder; Treatment of ADHD in adults; Treatment of women in all life phases, including during pregnancy and the postpartum period; Treatment of individuals with intellectual developmental disorder.
